**** RADIOTELEX - P.O.BOX 750 925 - D 2820 BREMEN 70 - WEST GERMANY ****
03-01-1985

A happy New Year !

It's 1985 and as you might have expected, RADIOTELEX offers you a "monstrous" log section this time (all of Christmas and the other stuff...). News might therefore be not that much as it was last time but, nevertheless, some items will occur in that section !
 The deadline for Telex No.39 is set for January 16/17, 1985.
 Hope to hear from you all again then (hello, Sweden and Finland !?!!) !

THE LOGS

time is always GMT !

R.Atlantic 2000 Int	7330	27	2 IRC	QSL-card,info-sheet, pers.note, X-mas-card

And now over to a very short NEWSSECTION !

R.Apollo Int (c/o P.O.Box 5, Hunstanton, Norfolk PE36 5AU, England and c/o RT) will be on with the 3rd birthday show on the first weekend in February 1985, that is the third. Apollo then will be on the air since 1982 without any disturbances from the GPO. As written earlier in RT, the listeners are invited to send in short tape recordings (1-2 min) for a special show. The tapes will be returned afterwards !

R.Atlantis (no, not the RASW !) returned after years of absence from shortwave on December 23rd, 1984 and was heard again one week later with improved modulation quality. The station put out a 30 min show presented by R.Mitchell; announced frequencies were 6230, 7315 and 11400 kHz although the 41m outlet was observed only. Address is still P.O.Box 41, 7700 AA Dedemsvaart, NL

As a great surprise, Atlanta R. returned on December 30th on 6240 where they suffered from interference with Spectrum WBC. The P.O.Box 319 -adr in Edenbridge is still in use as the station will be sorting out their mail itself.

The Flying Dutchman appeared for the very first time on SW on Dec 23rd on 6225 kHz. This station has also been active on the MW around 1290 / 1305 kHz putting out international programmes during the nighttime. Adr: Postbus 58, Westerbork, NL.

Station 41 is now scheduled to transmit every 2nd Sunday of the month on 7373 kHz, 0900-1200, you can expect them again on January 13. Adr: 7 Chantry Avenue, Northwich, Hartford, Cheshire CW8 1LZ, England.

R.Tonair from NL tested a new 400 Watts tx in the afternoon of 26-12-84, but had problems with the modulation, next tx will be on Jan 6 on 48m.

bye + FFFR

Hi you !

Here we are with number 39 and we hope that it will satisfy you to read it ! Last time (no.38) we had that mass of logs due to the holidays so that news came quite short. Let's see what's it about this time!

Deadline for No.40 is January 30/31, 1985

The Loglist, time is always GMT in this mag !

For the 'newcomers' to Radiotelex: The S-rate is divided into three sections: UK (=United Kingdom), CON (=CONTinent), and SCA (=SCandinavia) to show how different reception in Europe can be. Of course, this system only works when Radiotelex gets sufficient observation reports from all over Europe. Especially Scandinavian listeners should write in more often.

QSL-Corner

*Station	*kHz	*days	*sent	*received
Station 41	7373	107	SAE	QSL-sheet,pers.letter,info-sheet,stickers
	7373	10	SAE	the same !

KOL Europe	6310	24	SAE	card

And the editor is still waiting for his QSL from R.Mirage Int. He sent his report for the transmission on 7350 kHz on November 4, 1984...

Here is some kind of new part in RADIOTELEX: If you have questions concerning Free Radio you can send them to us and we will try to answer them.

*I.B. from Scotland asks if the R.Black City which is on every now and again on 41m is the same station as the one back in 1979 ?

-Yes, the station is the same. They formerly transmitted around 7315/9

kHz. They were said to broadcast from Southwest-Germany then.

So far with this section for today. Feel free to write in with your questions !

Now over to the NEWS:

R.Apollo Int (c/o Hunstanton-address and c/o RT) likes to remind you of its 3rd birthday celebrated on the 1st or 2nd Sunday in February 1985. You, the listeners, are invited to send in short announcements concerning the station or Free Radio in general on tape with a length of 1 to 2 minutes. The tape will be returned afterwards !

A Dutch station that first appeared back in 1980 called R.Aquarius Int is currently testing on 7490 kHz between the hours of 0800 and 0900 GMT. Their new address is Postbus 628, 3100 AP Schiedam, NL.

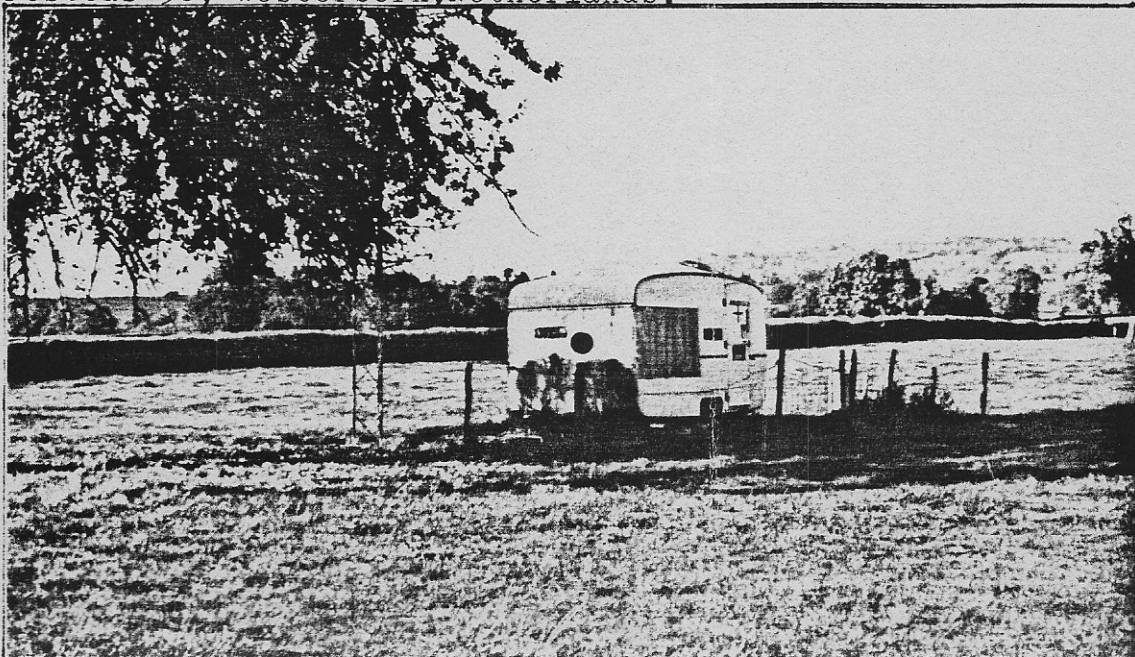

Canzoni R. (we reported in no.37) is now short before starting via R.Delmare's transmitter on 6206 kHz. As expected, they will use our address at Bremen and they are planning to be on regularly on short-wave, maybe also on mediumwave and FM some time. The programmes will be transmitted via relays but there is also the possibility to hear them soon via an own (??-ed) rig situated in Ireland or Italy (it's a German station !-ed). The shows will consist of international popmusic. Canzoni R. appeals to stations on all bands to transmit relays regularly for them. The appearances will also include a letterbox, a free radio spot, guest DJ shows and others.

R.CLCG, c/o P.O.Box 54 01 01, D 4100 Duisburg 11, W.-Germany, informs:

- The transmission on December 23rd via Station 41 was not planned by the CLCG-Station 41 needed an old cassette !
 - Planned transmissions via Delmare on January 27 and February 10, starting at 0900 and 1200 GMT respectively. The January-transmission will include shows in English and Dutch and a prog from Andy Top (RWI)
 - Attention: Who knows the station that supposedly broadcasted a CLCG-prog on December 25 on 7360 kHz between 1001 and 1020 ?
- (Editor: look it up in RT no.38, logsection. R.Madison was on the air then !)

DJ-offer. A French DJ on a local FM station is looking for regular programmes in Dutch and English on tape lasting 60 minutes each. It is also possible to exchange programmes. If you'd like to know more, please contact: Jean-Luc Vigie, 2 Avenue du Vieux-Moulin, F 62 630 Etaples, France.

Flying Dutchman R. continues testing on 48 metres for the time being intending to achieve a good signal and modulation. When reasonable reception is assured FDR will air real programmes. Their address is: Postbus 58, Westerbork, Netherlands.

On the left, you can see Sunshine Radio/Shropshire's transmitting - caravan as it is looking nowadays. The windows are secured and the wheels have been taken away.

R.Fireball 735 has been heard on January 13, 1985 for the first time, announcing a test transmission and an address of P.O.Box 5 (100% sure), Brandon, Suffolk, England. Regarding the address, has this station anything to do with the from time to time popping-up R.Caroline SW who used to use P.O.Box's 1 and 3 formerly ?

The Finnish R.Meteor made early morning test broadcasts on December 23, 25, and 26, 1984 and also one in the afternoon of December 30th. The power is 20 Watts and the antenna used is a "triangle" loop for 48 metres, highest point about 15m above the ground (for the UK: =50 feet). Their address is: Postbus 41, 7700 AA Dedemsvaart, NL.

Offshore. R.Caroline and Laser 558 have both been affected by the weather in the night of January 6, 1985 when it came to gale force 10 in the North Sea. Caroline lost its anchor and even on British TV it was reported that they had drifted 10 miles and called 'Mayday' but managed to restart the engines to get to their old position. Laser's back mast fell down the same night and took the antenna-system with it, which was rebuilt on Friday the 11th, the day, on which both stations returned to the airwaves.

R.48 recently made a live broadcast on December 6 on 41 metres using the mysterious 4m high car-whip antenna on the side of Dave Scott's (RAI) bedroom-wall. This first effort fell through because of lacking earth-connection. They then took the transmitter and antenna to Howard Bell's car, parked some 20m from the house and mounted the antenna on Howard's car roof rack. They now, of course, had to feed the modulation using a 20m long audio-lead from the studio to the transmitter but didn't manage to turn the audio up more than two thirds due to RF-feedback. The show lasted about 40 minutes and listeners were invited to call 'Scott Base'. In fact, 2 people rang and gave sufficient reports! Unfortunately, the transmitter couldn't be fed by mains so they had to run it off the car-battery which started to go after some time. R.48 has decided to go international in 1985 with several broadcasts in English, Dutch, and German. The transmission on December 9 on 7360 kHz was a test for that project including the first Dutch show presented by Karin. Listener's mail is now answered in the Netherlands by the operator of the Utrecht P.O.Box 19074, 3501 DB Utrecht, Netherlands.

The Satellite Broadcasting Company plans to be more active again in 1985. Programmes then will be broadcasted via another station. OP Mikel Air (what a name !) will then be able to use an own mixer which he can easily expand . SBC uses Postbus 41 at Dedemsvaart.

Spectrum World Broadcasting , 134 Eastworth Road, Chertsey, Surrey KT16 8DT, England announced that they have received more than 100 reports for their X-mas transmissions including some amazing ones concerning their 3905-outlet. SWBC appeared again on 13-01- saying that they were on 6240 kHz only.

Weekend Music Radio ,42 Arran Close, Cambridge, England, could not relay R.Telstar as they weren't on. They got a tuning capacitor from WMR's OP as theirs was damaged in their raid but also something else failed which they didn't get a chance to fix for New Year.

And that ends up RADIOTELEX this time. Please remember that you can change mint stamps for SAE-postage of certain countries via our address ! Please write for info ! Some of the subscriptions are also running out, so please look on your envelope !! If there is any station out there wanting a RADIOTELEX-promo-spot, please send in a suitable cassette and we'll record it for you, O.K. ?

Bye, 73's and FFFR.

pure fiction that is... 31-o1-1985

"It's 1000 GMT. This is RADIOTELEX with issue no.40.The weather is rainy and windy but temperatures have recently started to go up again..."

Well, sorry, but I only thought of RADIOTELEX being some kind of 'Radio' Telex on the air..

"Thank yous" to all who renewed their subscriptions recently. It's good to see that you keep supporting as well as being interested in this news-sheet !

Deadline for number 41 is February 13, 1985. Yes, we try to bring it out on Wednesdays again. So be quick to stick your numerous letters in the mail box on the preceeding Sunday, please. Perhaps you'll find one which is also serviced on Sundays ???

The Sunny Logbook (by now, the sun has come up, that's why I call it 'sunny'
this time, you see ?-ed) "By now it even knows the bee: time is always
G M T !!" (poet unknown)

-- information about radiotelex -- information about radiotelex -- information a

- a) You might not know it when you didn't know RT in its beginnings, but in 1983 and also 1984 we sent out information concerning the RT SAE-service. Well, we haven't had much response on it but, on the other hand, don't know WHY...because it helps saving money: for you, the listener and also for the 'other end' of radio: the station operator. To make it short: the SAE-service can provide mint stamps of ,e.g., the United Kingdom or the Netherlands (others available). When you are going to write to such a tiny Free Radio station owned by an operator whose hobby it is to run that station, a hobby that costs a lot of time, you, the listener, can help him saving time when you enclose a Stamped, Self Addressed Envelope with your name and address and the stamp (he instead would have to buy first) on it. Worth thinking about ?
- b) The little infosheet RADIOTELEX needs your participation. It can't be too difficult to write a few lines every two weeks on what you have heard, can't it ?? Or don't you use RT for listening ?

The NEWSSECTION

To start with this time, first news come from R.Albatros :
RA will return to the air in February 1985 with a modified transmitter - the crystal for 6200 kHz blew up while transmitting for the last time in Decemebrr 1984. When they were heard first on Novemebrr 25 only few letters were received at their address of Postbus 290, 3330 AG Zwijndrecht, Zuid-Holland,NL. The power is approximately 10-25 Watts with a PE 1/100 valve modulated by 2x EL34 and a 15m longwire is used as antenna. DJ Peter likes to receive also your letter when being back soon on 6200 an 1620 kHz.

RADIO APOLLO -yes, it's them again here in RADIOTELEX. INTERNATIONAL It is almost 100 % sure that their anniversary transmission will go out on February 10, 1985 on 6200 kHz. Write in

today as you have still the chance of being heard on the air when sending in a cassette with a short announcement, wish, or whatever on it. You can either use the RT-address or P.O.Box 5, Hunstanton, Norfolk PE36 5AU, England for correspondence.

R.Aquarius (c/f RT 39) seems to become more active now. Here is the address again: Postbus 628, 3100 AP Schiedam, NL.

R.Big Brother from Osnabrück announced that their monthly broadcasts will be repeated via R.Delmare on 6206 kHz after being aired via their own transmitter. The first repetition will take place probably on the first Sunday of February between 0900 and 1200 GMT. The programme will include a 40 min feature on political pirates in West Germany. RBB recently (27-01-) had problems with the transmitter, as it seems, because they abruptly signed off after approximately half an hour in mid-programme. You can contact them via RT.

Community Radio and other plans in Great Britain. Last week, a newspaper article informed that the government will establish local community radio stations as what they call a 'third tier of broadcasting' after the BBC and the IBA. They plan to set up 20 low-powered community stations which shall be on by the end of this year (!!-ed), but they didn't inform how stations should apply for licenses. Apparently, Sunshine R. in Shropshire and R.Jackie in London are favoured stations (favoured of the audience or of the government ?!!-ed). They want to introduce two types of different stations:

- a) local community stations, low powered on VHF for neighbourhood coverage and for towns that aren't big enough for ILR-stations.
- b) next year, specialist stations aimed at minorities (either musical or ethnic) should be set up but it wasn't said for what coverage or band.

community stations continued...

At least, the Member of Parliament added some kind of rubbish to these ideas: a station, he said, will cost between some 100 000 and 250 000 £ Sterling to set up which is evidently nonsense. Looking at this last sentence, I presume he had big buildings with many offices and interesting-looking people on his mind when he said this. This also would explain the costs he mentioned.

The Free Radio Service Holland (FRSH) will be back on February 17 via Delmare on 6206 kHz including the full programme schedule 0900 - 1515 GMT. A motown special is planned for the March transmission. Address remains unchanged: Postbus 41, 7700 AA Dedemsvaart, The Netherlands.

Future World Radio has to face mailbox problems currently with the operator of the 725-Arnham-address which could be the reason that your reception report hasn't been answered yet. Any way, they hope to sort this problem out soon.

News on Italian stations:

R.Manila has closed as has R.Europa Internazionale.

New activity has come from R.International Verona on 1621 kHz with 100 Watts of power. The manager is Flavio Mischi and when you hear them, here's their address: Via Corso Porta Palio 34, 37100 Verona, Italy.

R.London UK appeared first last weekend, January 27, on various frequencies in the 48m band testing their ex-Naval transmitter. The operator called himself Richard and told Weekend Music Radio, with whom he QSO'd, that he had previously working for R.Floss and R.Jackie in London. He also mentioned to test again next weekend to start with regular programmes after that. Address he gave was: RT 163, P.O.Box 206, Aylesbury, Buckinghamshire, UK. (Remark by the editor: To calm confusion in the logsection of that day, it is not sure if the station announcing also a name of "Wonderful R.London" is identical with the one reported above. It may be that somebody different from the UK heard RL-UK's transmission and himself started to go out to show that he's still active...)

Here is some tiny info concerning NL-addresses:

- R.Black Power, Postbus 643, Hoogeveen, Holland
- Johnny Walker, Postbus 13, Weerselo, Holland

Offshore. After Laser's return (c/f RT39), they again disappeared on Jan. 14 and came back the following Friday morning at 0300 GMT with a very weak signal ID-ing as "R.33 1/3" and playing "laid back" album tracks, at 0600 they started ID-ing again as Laser 558, and said that they were using a temporary antenna system. Modulation also seems rough and the signal has fallen from an average S 4 to app. S 2. Rumours say that they have financial problems, apparently the US-side of the operation costs US \$ 60 000 per month to maintain, and advertising only brings \$ 6 000 per month, also rumours say that Roy Lindau wants to buy another ship to replace the Communicator, and yet another (wow!-ed) rumour say that a well-known business man in the UK wants to buy the station. None of these are confirmed.

We have now heard that several sources have given the false adr for Pacific Int as c/o RT. They can be contacted only via RWI at BP 130, F 92504 Rueil Malmaison CEDEX, France.

Spectrum World BC intends to do yet another broadcast marathon over Easter. You can already ask for their tentative operation schedule at 134 Eastworth Road, Chertsey, Surrey KT16 8DT, UK. Spectrum currently transmits every Sunday to Europe on 6240 kHz 0830-1100 or longer with a format of 50% spoken word (SW comedy, features like e.g. "The History of Broadcasting" and 50% Top Quality music.

And the final item: A report has come in that R.Sylvia has been raided by the German GPO an police on December 9, 1984 after 90 minutes of transmission at 1227 GMT with 4 persons caught. The P.O.Box is open until mid-1985.

13-02-1985

Hi !

RADIOTELEX is out on a Wednesday again and I hope that some more of you are reached now before the coming weekend. We try to get it that way in the future so you have to post your contributions on the Sunday before the deadline, the next one is on Wednesday, February 27, 1985.

The excellent logbook of February 3, 1985

NEWSSECTION TIME IS GMT !

The first station to report about this time is... yes, you guessed right: R.Apollo Int. This one with the by now confirmed history of three years tried to put out their anniversary programme last weekend (Feb 10) but didn't get too far with it because after the transmitter has been put off the air on 7400 kHz to see whether this channel was clear or not, it was found to be disturbed and it was decided then to change to 7350 kHz on which it was surprisingly not possible to tune the rig up again properly - anyway, R.Hotel Amigo must have heard these efforts and immediately started to hum on 7350 kHz. By the way, this transmission came from Scott Base, not from the planned site. Due to heavy weather (lot of snow, low temperature ,...) the repetition of this show is postponed to better conditions outdoors...Also, the transmitter has to be repaired now. RT-address or P.O.Box 5, Hunstanton, Norfolk, PE 36 5AU, England for reports.

R.Arena , Postbus 47, 7010 AA Gaanderen, The Netherlands, tells in a letter that he'll next be on the air on February 22 (a Friday) on 180m (=around 1610 kHz) from on 0000. His next shortwave broadcast will either be at the end of February or the beginning of March. Power on short-wave is 200 Watts.

Atlanta Radio informed in a letter that the next transmission will be in March or around that. The Edenbridge mailing address seems to work properly as far as Atlanta is concerned since the staff of the station picks up the mail themselves if any problems would occur. Just to remind you, the complete address reads as follows: P.O.Box 319, Edenbridge, Kent TN8 6QE, England.

R.Batida says that the transmission on 7347 kHz on January 27 (c/f RT 40) was not one of theirs. When looking at the logsection of February 3, the same station seems to have broadcast. Another info is that Batida is transmitting on VHF-FM since December 30, 1984 on Sundays at 1600 in stereo with an approximate output of 50 Watts. Reports are always welcome. c/o RT-address.

The programme planned for February 10 via R.Delmare will be transmitted for R.CLCG on February 17, according to an announcement of J.Rood. R.CLCG is also planning further relays via stations in the UK, Ireland, and Holland, according to the FRA-Germany, R.CLCG intends to hire airtime on R.Spoleto Int / Italy. When writing to R.CLCG, please don't put "Radio" on the envelope. Postfach 54 01 01, D 4100 Duisburg 11, W.-Germany is the address.

Fireball 735: P.O.Box 5, Brandon, Suffolk, UK mentioned in RT 39 does not exist, according to the GPO, the mail is returned by putting "not known" on the envelope. Obviously another hoax by the operators of the ex-R.Xanadu who are a black station for QSLs. One advice: if you hear Johnny Stone or Victor Hartmann on the air, save your money and don't send them a report, they don't reply !

The correct address for Flying Dutchman R. is: Postbus 58, 9430 AB Westerbork, NL.

When writing to one of the "Flying Dutchman's Mains-Hummer Society" (e.g. Hotel Amigo or Rome Whiskey) please inform them that they first shall control their modulation properly before QSO-ing for hours and

hours on the band, drifting up and down all for the purpose of QSO...
Please: protect our ears !

R.Jackie closed down after 16 years of transmitting illegally to SW-London at 1900 on Monday, February 4th. Before that, British police and Telecom officials raided the station on Friday, February 1st at 1100 when all the transmitting and studio equipment was confiscated. On Saturday, Jackie returned with a reserve transmitter, only to be raided again on Sunday at 0200. After that, the station came back once more, this time on both MW 227m = 1332 kHz and FM 103.3 MHz and announced that they would close down for good at the time given above, as well as the location of the MW and FM transmitter. Listeners and supporters were invited to turn up on the site and in fact, 250 people came !! So did British Telecom and confiscated the equipment again 3 minutes before the official sign-off. Apart from Jackie, 5 other London stations were closed including Asian People's Radio, SOLA R., R.ACE (Asian station) and two others.

R.Jan Rap, Postbus 12, 9514 ZG Gasselternijveen, NL, hopes to make more broadcasts during 1985 using his 150 Watts crystal controlled tx on 7320 kHz. He hopes to have a new info sheet and possibly stickers available shortly, too.

KDFJ or KDXS or KBS... is the name of the new "Kelly Brown Project" we were forced to listen to on February 10 on 6240 kHz. I guess you already have filled in the boxes in the logsection so I wouldn't have another word on who has relayed this but just to demonstrate how this station feels, here is a quotation of an announcement Kelly B. made at the beginning: "...and we've just kicked Spectrum World BC off this frequency." Listeners can complain via P.O.Box 143, Wolverhampton, West Midlands, UK.

R.London UK re-appeared on February 3rd QSO-ing with R.Hotel Amigo from the Netherlands. During the conversation, RLUK stated that their location was somewhere in the North of London and that the tx-power used is 30 Watts. Address c/f RT 40.

Quoting the FRA-Germany yet another time, the station that appeared on 7480 kHz on January 27 was most likely R.Nova Musica testing a 100 Watts tx for planned regular transmissions. QSLs are available for 2 IRC at: Via Burrida 24a, I 33080 Porcia (Potenone), ITALY.

R.Pamela from the UK could be heard for the first time via an unknown relay on 7328 kHz on February 10. Address is: c/o 82a Delce Road, Rochester, Kent ME1 2DH, UK.

R.Rastafari returned on February 10 via R.Delmare on 6206 kHz. Address for RR is still: Postbus 162, Bemmelen, NL.

R.Ridiculous made its first transmission on February 3 on 6275 kHz and the second one followed one week later. Address for this station with the uncertain name is: Postbus 1019, 2200 BA Nordwijk, NL.

Both R.Sound of Switzerland and Station 41 plan to be back by Easter, but that's as far away as April !

Spectrum World BC has been quite often in the news lately. At present, they are scheduled to transmit between 0400 and 1000 UTC on 6240 kHz. Furthermore, it was announced that commercial advertising via SWBC is possible ! For further details, write to SWBC, c/o 134 Eastworth Road, Chertsey, Surrey KT16 8DT, UK.

And the last item concerns Weekend Music R. Dave Scott of Apollo and Howard Bell of R.48 are meeting Jack Russel soon to do some live broadcast. Listen out! 42 Arran Close, Cambridge, UK is the address.

And that ends up RT 41. 73 and Keep Listening, FFFR,

P.S.: Sorry, B.O.!

27-02-1985

Hello !

It's RADIOTELEX back again with number 42. Thank you for informing us with all those bits and pieces you found interesting.

Without any more words, here is our next deadline (for no. 43):

March 13, 1985 (Wednesday)

A special 'hello' to Sweden : your letters were here on Wednesday morning. Please keep on sending them on Sundays !

NEWSSECTION, time is GMT !

A station you probably would not expect to appear in this column is Adventist World Radio which is currently testing via own transmitter facilities at Forli/Northern Italy. The tests are carried out with a new 10 kW transmitter which is at present on reduced power of 2 or 3 kW; frequencies used are 6010, 6145 among others as well as 6205 kHz as observed February 24th. AWR is on the air via Forli daily 0600-0900 and 1500 - 1800 hrs in German and English and the address for reports is POBox 2590, Lisbon, Portugal. Perhaps you write to them to inform them that they are active on a Pirate band ???

NB: Hopefully, this won't be yet another religious station taking away airspace on 48 metres...

This time only a short item about R. Apollo Int : They will hopefully be back by mid-March and then will continue as normal on 48m.

An addition to the item on R. Batida in RT 41: the FM frequency of RB is 103.8 MHz stereo according to the OP Kenny Day.

R.Big Brother's relay transmission via R.Delmare has not taken place yet and future relays via that station are very much in doubt at the moment. Other stations intending to use the Delmare relay facility should be careful before all problems have been sorted out.
RBB c/o RT.

Info about Canzoni Radio :

CR will also be heard via R.Waves International in the near future. Among all listeners who will send a reception report and also send in some material for the DX-Cocktail, a year's subscription of RADIO-TELEX will be raffled off. Apart from that, they are looking for another DJ who should be able to produce the DX-Cocktail in German and English once a month - two per month are planned. Attention: Canzoni also plays the records you request or dedicates them to a certain person. They are, as they write, still testing but will in fact start their regular service in the not too distant future. Anyone who likes to get a programme info and a sticker in advance should send in 2 IRC now. Any material is free, of course, for their listeners in EastGermany. CR c/o RT.

Here is yet another organisation who deals with RADIOTELEX :
The CLOG offers a year's subscription of their magazine (for 1985) for readers of RADIOTELEX at a reduced rate of DM 20,-- (instead of DM 24,--) in the Federal Republic of Germany and for foreign RADIOTELEX-readers it will be at DM 22 (instead of DM 26,--). This offer is valid until March 15, 1985 for 1985. Those who are able to transfer the money can do by using account no. 2580 56 -434 (district-no. 360 100 43) at Essen made payable to Wilfried Meyer.

R.Jackie from London tried to come back on the air last week but was raided again after 90 minutes of transmission and lost about £ 1500 worth of equipment.

KBC Radio is not to be heard via Radio Waves Int at the present time due to Tom de Wit being very busy producing syndicated programmes for bars, discotheques, and radio stations in Belgium apart from his shows for Radio Time which are aired during the night on 7110 kHz.
A KBC-Club has been launched as well: for 10 Dutch Guilders you can obtain the next 4 KBC-Newsletters. Besides, KBC has organised a Free Radio poll plus another competition in which the best reception report wins a Free Radi Cup (whatever that may be...).
Peter Verbruggen of FRSH will also do some shows for KBC in the second half of 1985.

Laser 558 's rear mast broke again on February 10, they are now running a reported 500 W into a temporary antenna which doesn't allow good reception on distance... Roy Lindau, president of MMI has resigned and Richard Branson, head of Virgin records & Virgin Atlantic Airlines is reported to have bought a substantial amount of shares in the station. Four new female DJs have been signed up for the station, one was on two weekends ago in the 0900 - 1300 slot. Lessie (sorry, Jessie -ed) Brandon is now on Capital Radio Saturdays/Sundays 1200 - 1400 via satellite (!) from New York.

R.Pluto (do you remember that ?) will be having an Easter extravaganza broadcast on Easter Sunday / Monday. You can have a clue on where the transmitter will be located...

RADIOTELEX. Yes, it's true: one or two of you readers have asked about the SAE service. Here are the prices for certain stamps:
One 22p stamp of the UK costs you one --,80 DM stamp of the FRG. You can order at a maximum of 5 stamps per country. Others available are 70 cents of the Netherlands for --,65 DM in FRG-stamps and a French 2,10 FF stamp costs you --,80 DM, too. Ireland: 29p is available

for --,90 DM in stamps. I only issued the exchange rates for West-Germany because we never had any inquiry from other contries....hi When you want the stamps send together with your next issue of RT, there is no extra fee for sending the stamps otherwise, please send a --,80 DM-stamped SAE. Thank you !

Satellite Broadcasting will be active again on one of the next week-ends at night via a Dutch mediumwave station on 180 m. Shortwave trans- missions will follow soon via Delmare on 6206 kHz. DJ Mikel Air is now the only one on the station after DJ Herby has left .Postbus 41, Dedems- vaart, NL.

Spectrum World BC announced yet another new schedule which appears to be genuine at present: to Europe every Sunday 0900 - 1100 UTC (one hour later than before) on 6240 kHz. In March and April further over- seas tests are planned for 3905 kHz (alternatively 7350 kHz) both in Lower Side Band SSB.

Sunshnie R./Shropshire closed down last week following a tip of a friend from the beginning of last week who works for the DTI. He said that SR will be raided on Friday. The station therefore decided to close down for good on Wednesday morning after the breakfast show. But: when the DJ got to the studio (which is separated from the transmitter) on that Wednesday morning and started his programme, he realized that the station wasn't on the air. So they went down to the tx-site at Villa Farm to see if the automatic switch on/off device had failed and found the coaxial cable connecting the transmitter to the antenna-system cut through with an axe which resulted in the power instead of going into the antenna had some sort of stayed in the transmitter which had blown itself to bits and nearly wrecked the caravan as well. So they gathered the pieces of the transmitter together, took them to the DTI and handed them in saying: "We are now closing down voluntarily ." - They obviously don't plan to come back as a pirate as they sold various pieces of equipment to Ireland. The operator of Sunshine, James Harding, met the Home Office one or two weeks ago and they said if he was going to close down SR for good now, a real chance of getting a license as a Community Radio some day, c/f RT 40, should be apparent.

One contributor heard an UNID station on January 6 (quite long ago-ed), 1985 in Dutch with Dutch music as follows: 1113 - 1119 GMT on 6265 kHz, and 1220 - 1226 GMT on 6260 kHz. Address was given as: Postbus 7, NL 7710 AB Nieuwleusen, Holland but the name wasn't understood.

Weekend Music Radio, R.Apollo Int, and R,48 will do some kind of merger transmission on the weekend of March 9/10 (c/f RT 41). This is the chance to hear Jack Russell, Dave Scott, and Howard Bell live on the air. Also listen out on a Saturday, not only on Sunday !

And that ends RT 42. Thank you all for sending in your contributions ! Do so also next time !

13-03-1985

Hello again !

The usual loggings plus some news, well not that many items as we had the last issues due to, probably, bad reception conditions. Nevertheless, we try to keep you happy with some exclusive photographs we received from Anoraks Ireland (yes, he's returned to the scene !). Also, we had an immense run on our mint-stamps-stock which eventually led to a disaster (the Dutch ones are out now, but we ordered new ones which should have been here today noon - but didn't arrive ...). They are expected these days. Another popular country, as far as stamps are concerned, is the UK. Come people and swap !

Deadline for RT No. 44 is Wednesday, March 27, 1985 !

NEWSSECTION IN RADIOTELEX time is GMT !

R.Apollo Int will be on again, as their transmitter is repaired by now, either on March 17th or 30th. Apart from the repetition of the 3rd birthday show, some excellent shows from UK night club DJ's are awaited as well as a show produced in one of R.Australia's studios !!! Addresses as usual c/o RT and c/o Hunstanton.

Atlanta R. from the UK will be back for another 'one-off' on coming Sunday, March 17. Look out for them on 48m.

R.Atlantis SW (Hunstanton + Bremen) will be back on March 31st on 48m, probably also with a R.Marabu-relay (Bremen-address).

A new station which incidentally only one (1) DX-er had the opportunity to listen to is R.Bavaria. This one was noted on March 3rd on 7280 kHz and isn't in the logsection of March 3 as we had compiled it before we got this interesting bit ! The operator uses a KENWOOD FT 101 E transceiver with an FD 4 Windom-antenna and plans to be active regularly soon on either 7280 kHz or on 6235 kHz. The following address is valid: c/o Postfach (P.O.Box) 3112, D 8670 Hof, West Germany.

R.Eastcoast Commercial (now c/o 32 Victoria Road, Salisbury, Wiltshire SP1 3NG, England) is now scheduled every 1st Sunday of the month

RECC, continued...

on 6230 kHz to avoid interference with Westside Radio Int. on 6280 kHz.

Falcon Radio the station on 6850 kHz, can be contacted via Department FR, P.O. Box 99, Northampton in England. The DJ is Peter Moss who is mostly playing Beatles Golden oldies.

Flying Dutchman Radio from the Netherlands has been raided on February 17 by PTT and police when they took away his transmitter and various parts of the studio equipment. Flying Dutchman recently tried to sort his modulation problems out and wanted to rebuild the rig partially but now hasn't the chance to do so. As this was the second time he has been caught, it is not probable that he will return to shortwave.

Ireland. A new station (name is not known yet) will be launched the coming weeks in the old premises of South Coast Radio in Cork. Owner and transmitting engineer are now busy to set up a "well known" 500 Watts transmitter to take off with a 24h service presumably. The operation will be run on mediumwave but the frequency isn't known yet.

R. Julie, ex All Female Operated station of the late 70s, are planning a one-off via R. Atlantis SW in May or so with the two original presenters plus a new one.

One reader suggests to name the 'new' station KBSJ after its initials : Kelly Brown's Spectrum Jammer. Nothing to add.

R. Krypton, station that was (is) always suffering from pulse interference, will have its last transmission on March 17th due to financial problems, other commitments, and lack of time. This date is also their 6th birthday broadcast. Unfortunately, Krypton won't leave a clear channel for another station.

Taken from Weekly Report, the excellent every-week bulletin from Ruth and Barrie Johnston, here is some information on the comeback of a station immensely enjoyed by people liking Irish folk tunes :

R. Na nGael hope to be back on shortwave soon, but their frequency is not yet known. Once they were on 6340 kHz.

Radio 48 will soon be testing on 75m (perhaps 3905 kHz) to check up conditions down there. The test shall take place in the next 6 weeks or so during regular programme hours.

R. Rastafari plans to be on via R. Delmare every 1st and third Sunday of each month. Very interesting programmes for people who prefer reggae-music. Address is: Postbus 162, Bommel, The Netherlands.

Rebel Radio Network has been heard on 6203 or around that on March 10th with an address mentioned as P.O. Box 255, Venus, Texas, USA. The name 'R. London' has also been mentioned and the audio sounded very, very familiar, similiarly to the WRLI-relays once....

R. Ridiculous now sent along their QSL-cards for their 1st transmissions and, would you believe, the explanation for RIDICULOUS is as follows, according to their QSL:

Radio In Diversion, Intending Communication Under Limited Options, Unclassified Status.

They use a longwire antenna, length 24m at a height of 10m and the approximate output power of the transmitter is 20 Watts. The operator looks back on a long history, he started in 1966 on VHF-FM under another name with low power, made some mediumwave experiments and finally set up his shortwave service in 1985. Regular programmes will hopefully

Ridiculous continued...

commence at the beginning of April. His address is: Postbus 1019,
2200 BA Nordwijk, The Netherlands.

Although not mentioned in RADIOTELEX 41's logsection,
R.Titanic Int had been back on the air again on February 10th on 7360
kHz at 1000 GMT and received about 25 reports mostly from Northern UK,
Mid-Sweden, and the GDR where reception was fair but the modulation was
too bad which will be improved soon, hopefully !! Anyway, RTI hopes
to be back in the near future and they are planning a special "10th
Birthday Party" in mid-summer on various frequencies and locations.
All reports send to Postbus 41, 7700 AA Dedemsvaart, The Netherlands,
will be answered soon and are highly appreciated. At least, return
postage should be enclosed !

Trans World Radio (this is not Free Radio) have moved from 6210 to
6215 kHz which gives Delmare-relays on 6206 kHz now although we doubt
that's the reason TWR moved...hi...

R.Waves International is back on the 41m band on 7338 kHz and hopes to
be regularly on the air. RWI will put out some new relay services
for Canzoni Radio and also soon some mysterious stations such as
Radio Moniak, World Star Radio and Freizeitsender 104. We at RT know
the one who's behind the latter three stations and doubt if they will
ever appear on the air. If you hear our address announced, don't be
so silly to response to those stations - they are not allowed to use our
P.O.Box !!

RWI's Peter Hill will go to the Caroline Movement Convention on March
23rd, so UK DX-ers might meet this FR-DJ. Please write to:
RWI, BP 130, F 92504 Rueil-Malmaison CEDEX, France.

LISTEN TO R.W.I.
WEEK END SOUNDS
on 7340KHZ on 41ME
This is just for you
radio waves int

And the final item is about a new station from the UK :

R.Woodpecker came on March 10th on 6290 kHz and the address he gave
was P.O.Box 5, Hunstanton, Norfolk PE36 5AU, England.

** RADIOTELEX - P.O.BOX 750 925 - D 2820 BREMEN 70 - WEST GERMANY **

27-03-1985

Hope, you're doing fine !

Well, it's RADIOTELEX back again with No.44. When looking back,
 we cannot believe that we already did 43 issues...alright,
 participation this time was brilliant, concerning entries from the
 FRG but we would like more also from the foreign countries.
 Special "Thank you's" go to our new subscribers last week (in fact 3
 in 3 days !), also an opportunity to remind all the others to look
 on the current envelope in which they received RADIOTELEX - two numbers
 on the address-label mark when your sub expires.

Deadline (or, for Germans: Todeslinie) is : April 10, 1985 for No.45.
 Make sure that your contributions are stuck into the mailboxes on Sunday
 before (if possible).

Newssection in RADIOTELEX compiled in GMT

The alphabetical order this time allows R.Apollo Int to be the first station to report about.

Apollo will be on after some "forced vacation" on March 31, 1985 on 48m definitely. They hope to use 6240 or 6200 kHz and also they will rely on R.Atlantis SW or the station(s) on 6240, leaving the above channels clear. By now, it's not sure whether they will repeat the birthday show after all as it contains references to February, snow, etc... Apollo has also one outstanding relay from R.Nova / USA so that should be listened to some time in the future. The usual addresses c/o RT or c/o Hunstanton.

News from R.Batida, by now a local station in the Hannover-area as they go out preferably on FM (around 103.8 MHz) nowadays serving their listeners with the new trend "slow funk and soul" - a trend which is highly appreciated as DJ Michael tells looking at the feedback of the listeners.

Batida ctd....

New transmission times are 21.00 (nightshifting around) 2-3 times per week. Shortwave appearances are not very likely the next months.
c/o RT.

R.Bavaria (c/f RT 43) was noted again with a transmission on 7310/2 kHz on March 24th which was apparently live. The programme contained disco music with occasional announcements and IDs in English only though no address was given. Quoting RT 43, it is: Postfach 3112, D 8670 Hof, West Germany.

R.Bluebird plans to change its name to R.Europe soon. They only used the name Bluebird for testing-purposes in February and March. The correct address for this station recently heard on 6294, 6557, etc.. kHz is: Postbus 2062, 2800 BE Gouda (like the cheese-ed), The Netherlands.

Britain Radio Int has returned to normal operation recently and transmits every 4th and 5th Sunday of the month on 6230 kHz. Listen out for their special broadcast on March 31st (next Sunday) including the following programme line-up :

0930 Norman Nelson (featuring British chart climbers + 3 rock classics)
1015 Super Groups of the 60's (part 1 with Roger Davis)

1130 Guest DJ spot with Pete Lord

1200 Jayne's Motown Sunday

1230 Phil Abbot's music show till 1300 close down

Addresses: c/o 32 Victoria Road, Salisbury, Wiltshire SP1 3NG, UK or
c/o Postbus 19074, 3501 DB Utrecht, The Netherlands.

Canzoni Radio which unfortunately hasn't got that many letters for their first transmissions, are now having a new DJ who presents the "DX-Cocktail". Pirate Andy is his name. Canzoni can be heard via Delmare, R.Waves International, and is still looking for another relay-station. (Hint: please look under "S" in this newssection, perhaps a solution ?!?-ed) c/o RT

The CLCG offers again one of the "large, full colour, full layout"-magazine, i.e. No.2/85 which has been released recently and contains 30 pages, but , thanks to the layout, all through the mag you don't know on what side you are at the moment...in the middle of April, No.3/85 will be released and offers an extra, 13-paged-article about the Free Radio Scene in the Netherlands . Sample copy for DM 2,-- in mint stamps (in --,50 stamps) , foreign countries pay 2 IRC.
CLCG, c/o Postfach 540 101, D 4100 Duisburg 11.

Does anybody know what has happened to R.Dublin 253 as they weren't on the last two weeks ? Perhaps Paul Davidson of Anoraks Ireland can help ?

Mail to R.Fireball 735 can be send to P.O.Box 5, Hunstanton, Norfolk, PE36 5AU in England. (Wavelength No.2)

Italy. Radio Victoria reported that two Italian stations which usually operate on 41m have tested in the 48m band fairly recently :
R.Spoleto / 7140 was heard March 2nd on 6225 kHz and R.Time / 7105 appeared on 6208 kHz March 10th interfering with R.Delmare.

Another Italian station is R.Nuova Musica "the breakfast station when you have nothing left to eat except of the radio" tells in a letter (received via Via Burrada 24a, I 33080 Porcia (Portenone), Italy) that they have a limited power of 50 Watts and operate with a ground-plane antenna of 1/2 wavelength. They are on via 4 FM and one AM-SW transmitters from Friuli Venezia Giulia, 100 km from Venice. They are planning a "Foreign Listener's Survey BC" in which they are going to answer questions, read messages and greetings to foreign listeners.

KIWI, P.O.Box 1437, Hastings, New Zealand, is reported to broadcast at present every Sunday 0700 - 1000 on 5850 kHz with 30 Watts of power. A frequency change to 7375 kHz as well as an increase of power is planned for the near future.

The Kurzwellenfreunde Wuppertal have their local meeting on April 19, 1985 and announce that they are going to show brandnew videos of Radio Caroline and Laser 558, lasting 2 hours. The meeting starts at 18.00 GMT, the presentation of the videos at 18.30. Anyone interested to see them are invited to write in to Postfach 220342, D 5600 Wuppertal 22, FRG. The videos are shown in co-operation with OFFSHORE SPEZIALVERSAND

Radio Pamela now uses the following mailing address: c/o P.O.Box 5, Hunstanton, Norfolk PE36 5AU England. This station is on from time to time on or around 7325 khz as they were two weekends ago.

A correction to RT43: Radio Rastafari is scheduled to transmit via Delmare every 1st and 4th (not 3rd) Sunday, with a 45 min. show of reggae music. Address is Postbus 162, 6680 NA Bommel, The Netherlands.

Shortwave Services c/o Hunstanton, are offering to relay FM and MW stations which have their own transmitters, but would also like to have a shortwave outlet. The aim is to make the relays one hour long, giving two stations the chance to present their programmes per transmission. It is intended that Shortwave Services will be on the air around six times per year. (Wavelength No.2)

Starboard Sound, c/o 32 Victoria Road, made an unsuccessful test broadcast on February 10th. The main problem appears to have been a faulty aerial (Wavelength No.2)

Their next transmission will be on April 14th, on 6306 kHz with 30 Watts. Hopefully they will be audible with better luck then.

Summertime...when the weather is fine... well, so far, it has been not too fine but, anyway, I'd like to inform you that, as far as Germany is concerned, the clocks go back one hour on Sunday morning, the 31st of March, between 0100 and 0200 GMT, I think.

R.Tonair, Postbus 21, 7010 AA Gaanderen, The Netherlands, had a brief appearance on March 24th on 6240 kHz announcing that their next official broadcast would be April 7th.

And that ends up RT No.44. Please send in as many contributions as possible also next time. Deadline : see page No.1.
Thank you very much,

73 + FFFR,

Barrie and Ruth Johnston

10-04-1985

A big HALLO to every fan of Free Radio !

Here we are back again with a huge Easter logsection, as you may
 have expected, and the other "usuals".

Right, the next deadline is , for RT No. 46, April 24, 1985

Starting with the loggings of March 31st

Oh, just a moment, an amendment to the last issue : of course, clocks
 didn't go back one hour (as we had liked them to in the last issue....)
 but had to be turned one hour forward. So now GMT is MEST is -2 hours.

Now over to the NEWS.

R.Apollo Int (c/o Hunstanton-adr or c/o RT-adr) which made some transmissions recently wrote to Falcon Radio about two weeks ago to arrange on air- appearances in order to not colliding with each other but - guess what ?- Dave Scott's letter to Falcon Radio was delayed by the post which resulted in the 2 stations coming up on 6200 kHz on Sunday, 31st of March 1985. The following week, the Falcon OP rang Dave and now they try to get it working .

R.Bavaria replied last week to a reception report of the editor and informed us not to publicize their address again (therefore : please look it up in RT's 43 + 44, hi...) because they want to get rid of the letters pouring in from listeners as they think it is too much work to answer all these ... probably the reason why they don't announce it on air any longer.

Channel Radio returned on March 31st on 6200 kHz and 6300 kHz as well as on Easter Monday (both frequencies again). As we can see from the loggings, they use P.O.Box 5 at Hunstanton, Norfolk PE36 5AZU, England.

The Climax Relay Service (Hunstanton address again) will be relaying US-pirate stations including KQSB on 48 and 41 metres in April or May this year. It is also possible that this is not true due to this item being taken off the air. / RECC-DX

R.Dutchboy was noted in SE-England on March 31st on 6225 kHz. /RASW

R.Eastcoast Commercial can now be contacted via their new mailing address at P.O.Box 5m,... At the present time, RECC broadcasts every 1st Sunday of the month 0900 - 1200 on 6230 kHz.

The Free Radio Service Holland (Postbus 41, 7700 AA Dedemsvaart) hopes to introduce a new and regular 41m band service in addition to their Delmare outlet on 6206 kHz. Nonstop music tests will be carried out in the following weeks on 41 metres. Meanwhile, R.Delmare is about to transmit with high power soon (500 - 600 Watts) as they recently received a suitable power supply.

R.Pamela is hoping for a relay via R.Dublin on 6910 kHz shortly on a Saturday morning from 0930 to 1100.

People who missed the Pluto transmissions the last weekend may be able to hear it one more time on April 14 before he signs off for at least another year.

Publications - well, at least only one : Free Radio Roundup has been handed in here at Telex. As we can see from the first page, it is published bi-monthly and costs 40p + SAE in the UK, or 60p outside the UK (for subscriptions outside the UK, drop a line). Mailing address is, as for the Weekly Report from Anoraks UK, FRR, P.O.Box 539, Blackpool, UK.

QSO. The recent "Easter on-air-conference" involving Apollo, Weekend Music Radio and , last but not least, R.Pluto is a funny thing to talk about, with other words : it was a good example for what propagation can do to a chatty round on the air. Well, Pluto, putting out a random QSO-call on Easter Monday which Apollo didn't hear put Weekend Music Radio heard, was QSO-ing with WMR then. Apollo by that time couldn't hear either of them !! So, WMR rang Apollo and suggested that Apollo should put out a test-loop just to see if he could hear Apollo...which neither of them (Pluto,too) could. Whilst leaving his radio tuned up to 6240 kHz, Apollo suddenly recognized WMR loud and clear for 5 minutes saying that if Apollo could hear him, he should come up at once.... which Apollo did and get a good report from Scotland but was skipping over Pluto, who is in the South ! To put an end to the story, when WMR wanted to come back for Apollo, conditions have already gone down to nothing so Pluto and WMR were calling Apollo in vain again.... OK ?

The Satellite BC (Dedemsvaart-adr) plans to come back on the air before summer (that's a word !-ed) 1985 .

Starboard Sound (just to remind you , c/f RT 44) hopes to be back with more luck next Sunday, April 14 on 6307 kHz, he uses the 32 Victoria Road address (Salisbury Wiltshire SP1 3NG,UK).

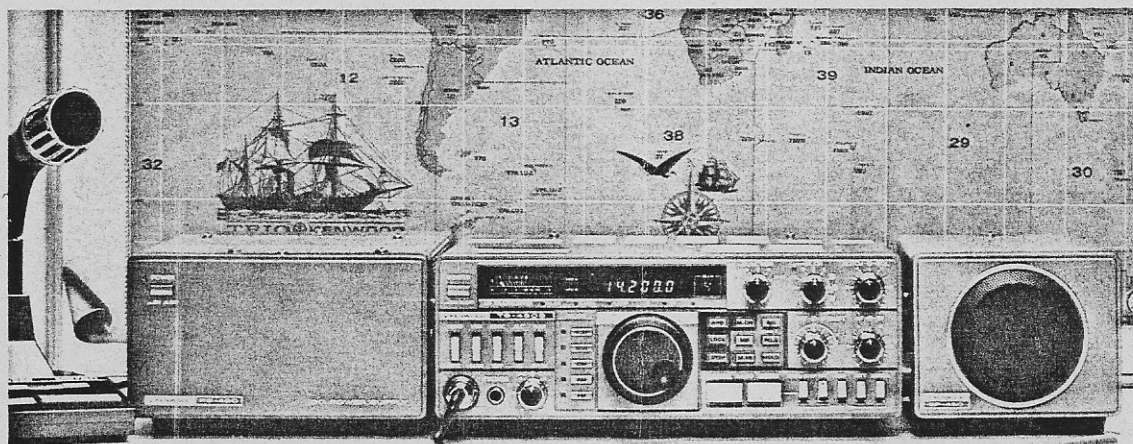

And,finally, R.Woodpecker, has crystals for 6230,6260,6290,and 7325 kHz, with other words, he gives the crystals to his relay station.

And that exhausts the news -items this time. The lacking caption for the photograph in the last issue has to be : R.Annabel, Main studio.

Bye, 73's and FFFR (write in next time !!), RADIOTELEX

NEWSSECTION

time is GMT !

Well, not that much this time, anyway, we try to make the best of it :

Atlanta Radio has changed its address to P.O.Box 5, Hunstanton, Norfolk PE36 5AU, UK for they haven't received any mail via the P.O. Box 319, Edenbridge-address for three month now. Atlanta plans to be on for 1 or 2 times this year.

R.Batida,c/o RT-adr, intends to broadcast more often on shortwave in the near future. Apart from Sunday, Batida may also come up on a Saturday; transmission times are extended to three hours now as far as shortwave is concerned. Their FM transmissions, in case you didn't know, are done live. RT proposes that Batida also should try other bands for a more local orientated coverage. Worth to think about ?

The Voice of Disillusionment is a new, not even on the air yet station from the United States which is looking for European stations that might like to use that station as a relay facility for broadcasts to the USA. For further detail, please contact Timothy, Professor Gamma of the V.O.D., P.O.Box 245, Moorhead, Michigan 56568, USA.

/via PIN

A new station which is rumoured to be relayed by R.Waves Int is Laser Radio Germany.

/FRA-Germany

And now to a rather unpleasant appearance on shortwave.

R.Moniak has finally made it to the air via R.Waves and in fact two reports for that station have been received here which we won't forward to the "operator" Heinz B. as we have announced earlier. Don't waste your money on this.

A new station to pop up the next time is R.Tutenchamun but, sad, sad to hear, not via an own transmitter but via Delmare. Tutenchamun will definitely use the RT-address.

R.Victoria will be closing down by Sunday, June 30th 1985.

And that was it as far as news are concerned. The following is a list of interesting bits for the Free Radio enthusiast.

To start with, ANORAKS UK is another must for the DX-er, in other words, they issue a weekly report (as they call it) which contains the actual news of the Irish scene (interesting for the mediumwave DX-er), offshore-items, land-based stations in the UK (mainly London area and other big cities) as well as the actual loglistings from UK-DX-ers concerning shortwave services. The price is 20p plus SAE for a copy and you can have subscriptions (minimum £ 1,-- for 5 weeks and maximum is £ 10,-- for 52 weeks). They also have a merchandise list with interesting bits on it. Write to

Barrie and Ruth Johnston

ANORAKS IRELAND is an organization which promotes Irish Free radio. Anyway, unfortunately, we haven't heard from them for quite a time now but they explained why Paul Davidson is not able to supply us with his newsletter any longer, his work simply does not allow it. Nevertheless, AI offers recordings and more, please write in and tell Paul that you read of AI in RT.

RADIOTELEX offers you mint stamps of the following countries :

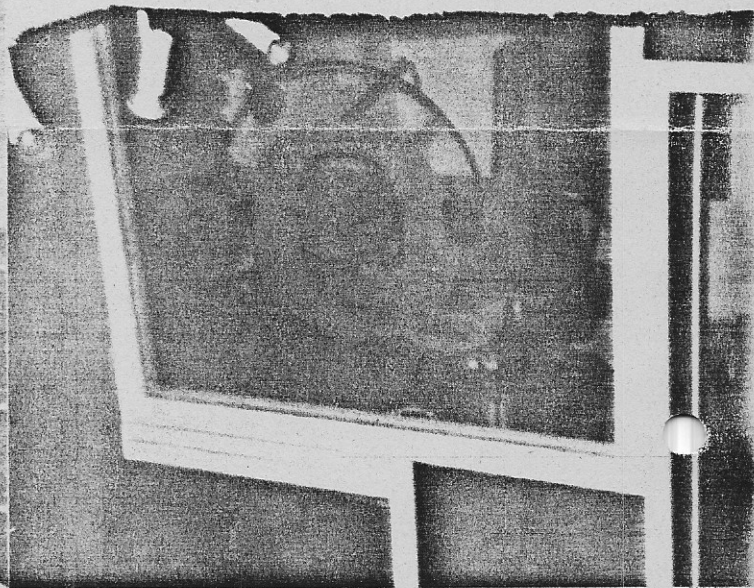

UK - a 22p stamp costs you only a mint -,80 DM stamp (order maximum is five)

Holland - a 70 cents stamp is priced -,65 DM in stamps (5 max !)

Ireland - 29p stamps are available for -,90 DM and finally France hasn't been sold since we run the SAE-service so we have an immense stock of those - perhaps you go to France on your next holidays , why not buy the stamps for your postcards now ? 2,10 FF - one is rated -,80 DM, no order limit. Please inquire to SAE-service. By the way, order forms are no longer available. Just write it on a piece of paper.

R.Eastcoast Commercial should contact us because we have about 9 letters for your station stuck in our office and don't even know if you are still using our address ??! Send £ 2,-- and we send them over to you.

To come to an end, here are finally some photographs. On the left, you can see Big L R. in Limerick City with DJ Mike Richardson on the air and on the right it's the logo of Q 102 in Dublin on the studio window.

Bye for now,

73+FFFR, RADIOTELEX

Remember that you credit RADIOTELEX when using items of it in your magazine or in your show on air. We try to credit our sources every time ,too, apart from private persons. Thank you !

NEWSSECTION in RT

R.Albatross (heard on 6225 kHz on May 5) can be contacted at the following mailing address : Postbus 290, 3330 AG Zwijndrecht, Zuid-Holland.

R.Apollo Int is getting new colour QSLs done as well as stickers and we show either of these in one of the next RT. Apollo was planned to go out on May 19 with a regular transmission but due to expected major magnetic storm activity (see later on in this section) this one isn't very likely to happen. Anyway, as most of the transmitting occasions we recently announced didn't happen it might be vice versa this time and he will pop up on that day or even one week earlier ??? Addresses are c/o P.O.Box 5, Hunstanton,... and, of course, c/o RT-adr.

Canzoni R., station to be relayed via different outlets recently, plans to have their first regular broadcast via R.Delmare soon lasting approx. 4 hours which they have already booked. During this broadcast, a year's subscription of RT will be raffled off. All you've got to do is to hear and also report this transmission to the station. Included in this 4 hour-thing will be a half hour of KIWI R. /NZL. On the other hand, Canzoni will be relayed by KIWI on 5850 kHz in the Newzealand-area. c/o RT-adr.

Johann of R.Delmare tells that he broadcasts every Sunday from 0900 to 1700 (European time) including relays on 6206 kHz with 500 Watts now. (in a recent transmission he told also something about 1 kW-ed). There is also now a special broadcast on weekdays only for listeners in America and Africa on 9070 kHz at 0000, however 9390 kHz maybe used instead. Delmare also broadcasts on 104.2 MHz. Address is: Postbus 36, B 2050 Antwerp, Belgium. Only use this address as otherwise, letters are getting lost or are returned !

Mysterious R.Dutch Voice, R.Dutch Tork, R.Test Tork, or R.Dutch Boy,... opinions differ greatly ! Heard several times recently around 6300 kHz and announced an address of Postbus 87, 7714 GDNieuwleusen, Holland.

Falcon R. can supply you with QSL-cards, stickers, T-shirts, etc... for Free Radio. If you're interested, contact them at Falcon Radio, P.O.Box 99 (NO Department FR, please !!!), Northampton, England.

The Hunstanton-address likes to know everybody that their forwarding service is "full" now and that they therefore won't take any new stations. P.O.Box 5, Hunstanton, PE36 5AU, England.

The following list of Italian stations operating on shortwave was originally published in "Play DX" 365 (April 1985):

7105 kHz	0700 - 1300	R.Time/IBC, CP 79, Scandicci	1kW
7110 kHz	1300 - 0700	R.Time/IBC	1kW
7140 kHz	0700 - 1700	R.Spoleto, Piazza Garibaldi 17,	
	+2100 - 2300	I-06049 Spoleto, Italy	500 W
7215 kHz	24 hours	R.Manila, Torino-closed down by the police-	
7295 kHz	0800 - 1600	R.Milano Int, Via Locatelli 6,	
		I-20124 Milano, Italy	5kW
7481 kHz	0900 - 1100	R.Nuova Musica, Via Burrida 24a,	
		I-33080 Porcia, Italy	100 W
9427 kHz	0700 - 1600	R.Europa Int, Via Privata Terzulli 10,	
		I-25100 Brescia, Italy	200 W
		(inactive at present ?)	

Note: transmission hours might have changed by now due to summer time (one hour earlier each case).

The planned merger transmission, originally planned to go out earlier this year, between Apollo, R.48, and Weekend Music Radio is now said to take place on May 26, 1985. Some sort of live-extravaganza can be expected.

Here's quite an old up-dater: the Dutch station with a male DJ in English heard in the UK on Saturday, March 23rd 1985 with an address of Postbus 29, Staphorst, Netherlands on 6202 kHz was R.Nova 4 which is presumed to be a spurious radiation from medium-wave.

R.Pluto, c/o Hunstanton, received only 7 reports for their Easter extravaganza this year as the station signed on at 1200 at last. The station, which had been off for the last two years due to "academic commitments" might be back in June again.

The station on 6260 kHz on Easter monday, 08-04-1985, with a RT-promo spot logged 0915 - 0930 was an "one-off" broadcast of R.Polygon, 3 Rosewarne Cottages, Rosewarne Downs, Near Camborne, Cornwall TR14 OBE, UK with DJ Steve Most via a British relay.

Propagation, wierd, wierd propagation ...

The reason for the really bad conditions on the bands the last weekends is that there has been heavy magnetic storms affecting the ionosphere. The so-called A and K -indices which are normally ranking below 10 had gone up to about 77 two weeks ago and are down a bit by now. However, probably even worse reception is predicted for the period around May 19 so we are not too optimistic on those logsheets... By the way, as we are informed, you can have your personal copy, which is free of charge, of those propagation forecasts by writing to WWV, time signal station, Fort Collins, Colorado 80521, USA. I am also told that the A and K -indices are read out via Media Network each Thursday at 1150 and repeated at 1450 (R.Nederland, 5955 kHz).

Sunrise Radio was heard in Central-Germany on May 5th after a long absence caused by the item before (see above) on 11400 kHz. Postbus 41, 7700 AA Dedemsvaart, NL.

The station on Easter Day, 07-04-1985, on 7348 kHz has been revealed as R.Noorderzon (sorry for missing alphabetical order !) with the address Postbus 1017, 2200 BA Noordwijk, NL. Their modulation tends to be rather lowish.

6208 kHz is used by R.Time (really ?-ed) and could be a registered channel for them soon officially so R.Delmare will have to leave possibly. Transmissions have been taken up in order to stop AWR Italy which misused also R.Time's other weak outlet on 6145 kHz. The R.Vatic frequency of 6252.5 kHz is well selected (do you think so, hi ?-ed) as they don't QRM with currently existing ship-to-shore links. Therefore, TWR had to move as had RNI 10 years ago. 6210 kHz is often used for communications.

R.Tonair made a broadcast on May 5 but according to our logbook, not many heard it. As stated around Easter, the power for the May-bc should have been 1-2 kWatts (perhaps 1-2 DutchkW ?).

Wavelength magazine, now out every two months, plans to come up every two weeks, too, now for which we wish them all the best of luck ! Perhaps Adrian might come out that week we don't ?

Wales - no, of course not. The Voice of the Leek - programme on April 7 was only an off-air announcement of Idris Evans recorded some time back and put in between various records. Despite other news, VotL can't be reached via Hunstanton !

And that ends up RT 47 ! Please write in again soon !

Well, that logbook wasn't that bad as predicted two weeks ago, wasn't it ?! The only thing you can learn from this regarding propagation : Never trust any predictions ! Propagation: In RT No.47 we stated that RN's Media Network gives out the actual propagation forecast every week; well, they had done so a couple of times but over the past weeks, nothing alike has been noted !

Dis is de QSL-corner :

Now over to the NEWS concerning Free Radio. Thanks to all contributors !

First of all an item which might be of interest to all fans of the poor modulation and barrel organ music stations (courtesy Alan Pennington,BDXC):

Apart from the well-known 180m band , 1508 kHz seems to be an interesting spot to watch out for Dutch pirates at nighttime :

Radio Tonair (Postbus 21, 7010 AA Gaanderen,Holland) were on that channel May 11th and also R.Orang Utang (Postbus 114, 7040 AL S'Heerenberg,NL) broadcast an international programme between

ctd.

...oooo and o2oo UTC on 15o8 kHz May 5th and May 12th and intends to do so in the near future as well.

Besides , R.Arena is planning transmissions on 15o8 kHz or 18o metres at nighttime (Postbus 47, 7o1o AA Gaanderen, NL is their address).

Just to remind you of R.Batida's Saturday transmissions :
They take place almost every Saturday between approx. 1o0o and 12oo (or even 13oo) GMT on a frequency in the 41m band. c/o RT-adr.

Canzoni R. station to be relayed via R.Delmare soon on a regular basis, plans to issue a "Canzoni Radio Magazine" ,irregularly, and the first ten issues will cost DM 1o,-- or 1o IRC. c/o RT-adr

Rather mysteriously, the weekend edition of the Christian Signs Monitor was broadcast via R.Milano Int May 19th. According to some of the announcements, that programme was produced for airing May 5th on RTL 2o8. Wonder how Milano got hold of that tape and whether this will become a regular feature on 7295 kHz ? (probably an off-air recording ?)

The Radio Delmare court case took place in the week before the 3rd Sunday in April resulting in a fine of an amount of money equal to DM 5ooo,-- (£ 14oo,-- of hfl 6ooo,--). Listeners are asked to send in a contribution in order to improve the station's financial situation. Postbus 36, 2o5o Antwerp, Belgium is the address. Concerning their emissions on 9o7o kHz, they claim to have received reports from as far away as Gabun (Africa). /FRS Goes DX 34

The address for R.Dutchboy which was given in a wrong way the last time is, now hopefully correct : Postbus 87, 771o AB Nieuwleusen, NL.

The Dutch R.Enterprise (Postbus 19o74, 35o1 DB Utrecht, NL) plans to take up transmissions again on mediumwave this time with the power supposed as 1 kW (!)

Finland. The radio monopoly in Finland seems to be over now as there are the first commercial independent local radiostations in Helsinki such as R.Lakeus (which started 27th of April), the second one taking to the airwaves was R.City on April 3oth. 22 stations are allowed until now to start broadcasting on an experimental basis, a test period which is said to continue to June 3oth, 1987. Most of these stations will start during next autumn and expected transmitter powers range from 1oo to 1ooo W , on FM only. Power of, e.g., R.Lakeus in Nivala is 2oo W on 9o.8 MHz and R.City in Helsinki is 1oo W on 96.2 MHz.

The Free Radio Service Holland offers a 55-minute-video tape containing shots from the recording session of the 30th December 1984-transmission (among others) for 69 DM or £ 16.50; members of the FRS listeners club only have to pay 59 DM or £ 14.00 By the way, subscription of FRS Goes DX magazine has been raised to DM 15,-- or £ 3.50, the mag is now issued in the A5 format and also the layout has been improved. So far for that extremely commercial item except for the news that the programme aired on May 19th may be repeated on May 26th. Address is: Postbus 41, 7700 AA Dedemsvaart, NL.

R.Ireland International, station which used to pop up on 6310 kHz is said to return on the same channel soon.

It was reported in the transmission of the Climax Relay Service on May 12th that the loved station KBSJ will not come back on the air and that last month's broadcast was the last. By the way, QSLs for that transmission of the CRS are not available but he hopes to put out some relays of American Free Radio stations shortly.

R.Marabu Int, co RT-adr, will be heard again on May 26th via R.Delmare. The whole programme is 90 minutes in length and comprises a 45 minutes Paul Jones Show and the scandinavia service.

R.Mirage Int, station for scandinavians, was heard again last Sunday (May 19th). Probably the op made it and tracked the transmitter from underneath his bed... address for this one rarely received is : Postboks 2778, Elverhoy, 9001 Tromsø, Norway.

Panther R. have changed address to P.O.Box 42, Delfzijl, NL.

R.1o1, station from somewhere in the Atlantic, will change also something soon : the frequency ! 7425 kHz shall replace 7445/7 kHz.

R.Scanwood, a Finnish operation, was heard in Scandinavia only on Sunday last, May 19th on two different frequencies in order to check out reception conditions. Address for this one is Postbus 41, 7700 AA Dedemsvaart, NL.

R.Torenvalk uses the address Postbus 36, 7010 AA Gaanderen, NL. The last time he was heard, was on 1508 kHz (becomes quite a popular channel !-ed). It is still in question whether this is the same station as R.Black Hunter.

And that ends up RT. 48. Thank you very much for all your help and as a gift from us, here is a nice photograph from a station we missed in this edition's newssection : R.Apollo /Scott Base. Note: the antenna you can see is attached between a street lamp (!!) and a 1st floor window !

05-06-1985

Hi there !

Although things are a bit stressing at the moment here (job,etc...),
 nevertheless are you now going to experience a brandnew edition of
 your RADIOTELEX.

As it had to be the way it usually happens, no letter at all arrived
 from Scandinavia until today, so you must imagine the respective S-rates
 another time,... Deadline for No.50 is June 19, 1985. Write in, please !
 You'll not only do us a favour, at least it's your own advantage !

The Logbook, compiled by the double-eyed editor with the two ears...

Laser 558	558	47	2IRC	card
WRLI (...)	6240	68	SAE	letter

Now, here is the newssection. Time appears to be GMT...

Let's start this time with an advertisement; no, not the usual stickers advertising FR-mags or something else connected with FR but a TAPE & STICKER's-offer. If you are interested, please contact TSO, c/o RT-adr:

1st anniversary programmes from Laser 558 recorded on May 24th, 1985.
Only these tapes are available - there are no copies :

- Charlie Wolf, midnight until 1 am 60 minutes
- Rick Harris, 7 am until 8.30 am 90 minutes
- (that one includes extracts from the first shows of May 24th, 1984)
- Erin Kelly, 8.35 am until 10.05 am 90 minutes
- Tommy Rivers, Charlie Wolf, 12 noon-1 pm 90 minutes

The price is £ 3,-- per hour.

There are also some very rare stickers (just five, so the first person who writes will receive them) :

"Caroline 259"-stickers, white letters on blue background with the following captions : "259 metres, the Sound of the Nation"

There are also others which read almost the same, write in for details. Any reasonable offer will be accepted. In case you are interested, write in !

The emissions heard on 6200 kHz and 6310 kHz on June 2 and May 27 respectively did NOT come from R.Apollo International or The Voice of the Leek. Once again, the latter one was misused again and people who heard this are asked not to write in as there won't be any QSL's issued, e.g. Perhaps the person known as responsible for these transmissions announces an own address next time and might even chose an own name for further broadcasts...

R.Delmare announced that they will have to pay their fine of about 6000 DM in mid-June and listeners/supporters of that station are asked to transfer any money to their bank account nr. in Belgium (Kredietbank 410-0561491-78); so far a third of the amount of money has come in by contributions of that kind. However, if not enough money is received, it might mean that R.Delmare would have to close down. P.O.Box 36, 2050 Antwerp, Belgium for any correspondence.

Although R.Eastcoast Commercial's Norman Nelson does not read RT, his secretary Neal West does - in fact our appeal in one of the back issues concerning about 13 letters which had arrived here since December/January are now on their way to England but - listeners have to accept this - no further letters are send on as of today.

Falcon Radio is going to extend broadcasting hours to three or four hours per week; apart from Sundays, it may also be possible to hear that station on Saturday mornings. Falcon has some excellent promotion material available, so it's no doubt worth writing to P.O.Box 99, Northampton, UK. Also, a listener's club shall be instituted in the near future which will then issue a Free Radio mag four times a year. For further information regarding the latter item, contact the FRLC at the same POB as above.

R.101, P.O. Box 2, 4680 Gemmenich, Belgium, which recently moved to 7425 kHz may change their outlet once again further down the 41 metre "pirate" band though nothing has been decided as yet. If you are local to the Nijmegen area why not try 101's fairly new FM-service on 101.5 MHz (25 Watts). Amazing stuff is also coming up in due course on shortwave, so listen out !

We have been asked quite a lot of times now if it is possible to print a list of those stations which are currently using our mailing address at Bremen. This is it, the RADIOTELEX-address-list :

R.Marabu International (RMI), R.Atlantis SW (RASW), R.Batida (RB), R.Apollo International (RAI), R.Big Brother (RBB), Canzoni R. (CR), R.Free West (RFW), R.Tutenchamum (RTUT) Note: as we take 10 stations as the maximum level, there's now space for two others available.

R.Sylvia, station from West-Germany having been raided in December last year, is still awaiting their court case which hasn't been fixed yet. In fact, there hasn't been any accusation made until now so things are quite uncertain for the operators what to face concerning that subject. Their address of Radioklub Sylvia, Postfach 600 431, D 2000 Hamburg 60, West-Germany therefore might be open longer as expected. Only one thing is clear by now : R.Sylvia wasn't raided because they interfered with a maritime service or anything similar.

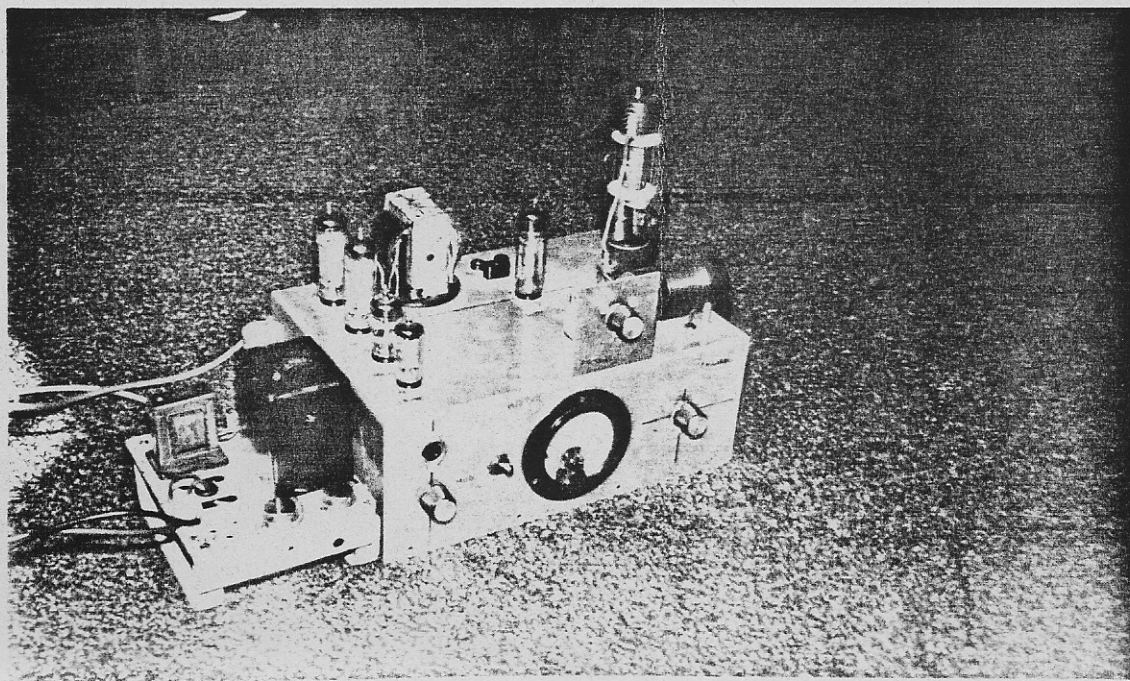

R.Victoria intends (intended ?) to broadcast via R.Time on 7105 kHz until their final day of broadcasting October 6th this year. As that piece of information was already received a couple of weeks ago, the present situation is a bit uncertain.

The final item leads to Weekend Music Radio which made it happen on May 26th to take part (as a listener, of course) in one of the rare live transmission pirates tend to make. Everything was OK during this broadcast : the power was about 110 Watts at maximum, the propagation conditions also made it possible to identify the station all over Europe, the DJ's behind the mike (see logsection !) had a fine time and also the RADIOTELEX-promo-spot (from where in the hell did they get that ??!). Situations like, e.g. record players repeating parts of records as often as they are not beaten against, etc, etc... Thank you for a good time 'on the air' ! Address is : WMR, c/o 42 Arran Close, Cambridge, UK.

Another photograph shows the R.Apollo 20 Watts transmitter.

Until next time, 73

RADIOTELEX.

 Friday (!), 21-06-1985

Hi there !

Would you know what to do when you have promised to come out
 with a fortnightly free radio-infosheet but simply haven't the time
 to ? Anyway, I didn't find the answer to that question on Wednesday,
 nor did I find it on Thursday (yesterday) and today I found - well -
 a bit time and now you (in Germany) probably read this on Saturday.
 Enjoy it !

Next deadline is July 4, 1985 (THURSDAY !), so probably also the guy(s)
 from Sweden will be present .

The Logsection, time is in GMT !

Newssection

R.Atlantic 2000 International still uses the Postbus 41,7700 AA Dedems-vaart / NL-mailing address (c/f RT 37). That station which, by the way, is the only French SW-pirate (except for R.Waves Int, I should think-ed) seems to keep a regular schedule of transmissions every 3rd Sunday of the month 0830 - 1000 UTC on 41 metres at present.

R.Bavaria (Postfach 3112, D 867 Hof, West Germany) lately told in a letter that their broadcasts have been called off for security reasons. Perhaps the recent emissions on 7310 kHz are somehow connected with R.Bavaria ?

Britain R.International (32 Victoria Road or Postbus 19074, 3501 DB Utrecht,NL) is about to celebrate its 5th birthday June 23rd on 6230 kHz with a special line-up of programmes :
0930 German service; 1000 Roger Davis' show including horoscope character reading for cancer people; 1045 Jayne; 1115 Free Radio News; 1130 BRI's 5th birthday show featuring guest DJ's and friends and the listener's credit list together with music from 1980/81; 1245 Norman Nelson(...); 1330 close down. Don't forget that BRI is going to be on the air June 30th 0930 - 1300 UTC as well.

R.Delmare,Postbus 36, B-2050 Antwerp, Belgium, is now transmitting with about 1 kW of power every week (Sunday approximately 0800 - 1600 UTC) though their modulation sounds rather distorted nowadays. Another item to add is that despite their sentence of some thousands of Marks, they don't think that it is necessary to put the transmitter off the air when no programme is on. A nice power consumption.... paid by donations of Free Radio listeners.

RADIOTELEX -

PAGE : 3 NO : 50 1985-2

It's unbelievable : FRSH (Dedemsvaart) finally has brandnew T-shirts available (orders were already taken in 1983 !) Remember : in case YOU are wearing such a T-shirt supporting Free Radio you are running the risk of being sentenced. Your chancellor's government may damage your health !!! Peachy,peachy.

FRA-Germany issues a 'Free Radio Fanzine' every 2 months (Germany's best free radio publication - that's at least what the publishers say) and recently launched yet another pop poll of Free Radio stations. Further details (and possibly suggestions who to put on the No.1 position, eh ???!) from Postfach 1214, D- 6-Tree-8-0 Gießen..excuse me of course it's Bath Homburg or, like the French says "La Baigne d'Hom-bürg", in West Germany. Try to laugh about it. Things are a lot easier to bear that way.

Future World Radio ,Postbus 725, Arnhem, NL, intends to test on 22 metres (wide or deep ?-ed) some time in the future. For all our friends from the British Isles, here is the wavelength in feet : approximately 72 ft.

The 'international service' from Gaanderen has been in the news quite a bit lately. Until the end of July, the following broadcasting for nighttime transmissions are valid :
Radio Arena on June 22nd; R.Tonair on June 30th + July 28th;
Radio Orang Utang on June 23rd and July 21st; R.Torenvalk on July 14th.
On July 7th either R.Orang Utang or Tonair will be on the air.
Transmissions will be in the early morning hours (i.e. 0000-0200 UTC) all on 1508 kHz. By the way, R.Torenvalk was audible on June 16th announcing a power of 500 Watts.

KIWI, P.O.Box 1437, Hastings,NZL, "The Voice of a non-atomic/nuclear Pacific" (as far as NZL is concerned...), which is operating at the moment from New Zealand every Saturday 0700 - 1000 UTC on 5850 kHz plans to broadcast on 7340 kHz soon replacing the previously used frequency.
(Media Network/RN)

An interesting item for Free Radio operators who are interested in propagation forecasts : This item has to wait a bit as two M's and one P are first now, you see ???

Radio Madison (Dedemsvaart) plans to broadcast using a 100 Watts-transmitter and perhaps a 2-or 3-element beam soon. During their next transmission they plan to announce a telephone number in Switzerland, as they told us with a postcard which arrived , unfortunately, one day late last time.

R.Milano International, Via Locatelli 6, I-20124 Milano, Italy (or foreign listeners may prefer this address: c/o Dario Monferini, Via Davanzati 8, I-20158 Milano, Italy) intends to purchase a 5 kW transmitter and erect a new aerial system beaming towards the Benelux and the UK, according to Dario Monferini in Radio Netherland's Medi Network programme. Radio Earth is going to transmit regularly via RMI beginning on September 1st this year.
(MediaNetwork)

Radio Pamela (Hunstanton) will only be on short waves for a couple of broadcasts as the station by now has changed into a local medium wave service to Rochester, Gillingham, and Chatham. Tests with the home-built transmitter generating 6-8 Watts of power are at the present time carried out on 185 metres / 1615 kHz on a daily basis.

And here, at least, is the QSL-CORNER :

*station	*kHz	*days	*sent	*received
R.CLCC	6207	6	IRC	QSL-letter,pers.letter
R.Bavaria Int	7310	63	2 IRC	QSL-card,form-letter, personal note
R.Marabu Int	6207	16	2 IRC	QSL-card,info-sheet, personal letter
BRI c/o Utrecht	6230	24 77	2 IRC SAE)	2 QSL-cards,BRI-news- letter,sticker
Channel Radio	6300	32	SAE	QSL-card,pers.-note
Staboard Sound	6306	33	SAE	QSL-sheet,info,pers. letter

on with the news...

An interesting item for operators interested to obtain a forecast on propagation conditions for their Sunday morning activities (very interesting, indeed) : Media Nederland now issues brief spots on that matter every Thursday in their Media Network programme starting at 1150 and 1450 GMT on 5955 kHz (or even try 17605 kHz) Besides, the ORF DX-Telegramm in German puts out a propagation info on Sundays (!!) 0925 GMT on 6155 and 7170 kHz.

R.Rastafari (the reggae station via Delmare) plans to be on a regular schedule via R.Delmare in July, moreover they plan to open a second channel on 6286 kHz soon. Station manager Lloyd Harvey Livingston tells in a letter that they do not have T-shirts,stickers and so on... but they sell reggae music tapes for 5 or 6 US-Dollars (quite expensive !!) For a complete list (and perhaps revised prices...-ed) write to Postbus 162, 6680NA Bommel, Netherlands.

Shamrock Radio from the Republic of Ireland can be contacted at the following mailing address : 130 Sandyford Road, Dublin 16, Rep.of Ireland

A mysterious Starlight R. (or something sounding like that) has been noted June 9th and 16th playing nonstop Top 40 and disco tracks with brief (pre-recorded ?) messages in-between mentioning that it is a test transmission from West Germany. The frequency 7310 kHz leaves room for speculations. No address has been heard.

And here is a message to the operators of R.Titanic International :
"Weiter so, Jungs !" ("Keep on doing so, lads !")
(FRA-Germany)

Vatican Radio seems to continuously annoy Free Radio stations and listeners as they are not only (illegally !!) occupying 6252 kHz - remember how many stations were on 6250 kHz before VR came - and have been noted on 7375 kHz June 9th till 1000 UTC as well. This, fortunately, appears to have been an error of a technician putting the station on 7375 kHz instead of the usual 7250 kHz that morning. What an experience : The pope as a pirate... (Dann schon lieber 'nen popelnden Piraten....-ed)

Last but not the least, but the least, R.Victoria announced plans (really ?) for their return in due time via R.Time, however, at a different time and a different frequency from what we first thought of : each Saturday night/early morning a 6-hour-broadcast shall be aired via Radio Time on 927 and 6208 kHz (or perhaps 7110 kHz) 2100 - 0300 Utc during summertime. The show is about to continue...

And Weekend Music Radio plans a test with 100 Watts on June 30th on 15045 kHz at 1000 GMT.

73 + bye,

RADIO TELEX

04-07-1985

A very big HALLO to you all !

For a change, most of the loggings this time will miss the UK-S-rate as we haven't got any contribution from over there, but instead of those lacking we can offer you brandnew Swedish and Finnish S-values. Enjoy it , hi !

Next deadline (before we go on holiday) is July 18, 1985 (Thursday)
RT No.52, our 2nd anniversary issue, will come out that day and No.53
might be out a little bit later than expected and therefore may contain
the loggings and news of three weekends...but let's see later on.
Here we start as usual with the last logsection in volume 2, time is GMT :

```
*kHz      *station      *time period *language,remarks,... *UK -CON-SCA

 beimonatlich in deutsch mit ak-tuellen Infos aus der Piraten-szene. Sample fuer 2 IRC's oder 1.50DM in Briefmarken von: P.I.N. Box 220342, D-5600 Wuppertal 22

The Newssection

The first item deals with Radio Armada (PB 9, 8150 AA Lemelerveld, NL) whose operator told a contributor lately : "I'm also only change at should at the short-wave.". Anyone who knows the meaning of that sentence, please contact us. Thanks in advance.

R.Batida (c/o RT-adr) recently increased power to 70 Watts on shortwave.

Britain Radio International (c/o Salisbury and Utrecht) which celebrated their 5th birthday June 23rd is currently producing a 90-minute-history tape featuring their events at BRI 1980/85. Technical problems occurred during their birthday broadcast as some rain got through the plastic bags the tx was wrapped in on site resulting in a few sparks and short-circuits.

The UNID station on 16-06-1985 (c/f RT 50) on 1640 kHz was R.Casablanca. There are two stations with that name : R.Casablanca, PB 25, 7880 AA Emmercompascuum and R.Casablanca, PB 607, 7800 AP Emmen.

Holland. R.Netherlands recently published a report concerning the question of pirate radio in NL and in particular about a young Dutch boy (not R.Dutchboy, hi) who broadcast with his 3 Watt-transmitter on the same frequency used by the Amsterdam police force. The report continues "He blocked communications between the control centre and mobile patrol cars for 4 hours on June 22nd and again for some 5 hours on Sunday before radio control cars traced the location. Attempts by the police to change frequency were soon foiled by the crazy operator moving likewise and playing popmusic. The father of the boy at first refused entry to the premises because he couldn't believe the small transmitter was causing such an interference. It's drawn attention to just how vulnerable the emergency services are. Coincidentally, last Friday the Dutch cabinet announced plans to restrict the sale of unauthorized transmitters. In most towns of the Netherlands there's one electrical shop (not shock ! hi) where "Kits to build" low-powered FM-transmitters can be bought for less than 20 Guilders. In about three months time, shops selling any form of transmitters will have to register their sales and ask the customer to prove he has a license to use such equipment. Last year, some 350 pirates were traced and prosecuted. Most of them have been operating with FM-transmitters stronger than 50 Watts. In Arnhem, chief-of-justice Mr.H.Peirenberg (name not 100% sure) has just announced plans to investigate methods to prosecute companies, mainly small shops, which advertise on the pirate stations thus helping the operators to remain on the air and pay any fines.

(Media Network, June 27th, 1985)

Iceland. Good news for radio-interested people over there : the Icelandic parliament, the Alting, has issued a new legislation concerning private radio and television which will be legalized from January 1st, 1986 onwards. Commercial advertising has been allowed for both the state radio & TV-stations and private broadcasters.

(SCDX, June 25th)

R.Pacific International has closed down since the operator R.Grahamme has decided it was time for a change. The final programme was aired via R.Waves on April 28th. Richard says that R.Pacific was often criticised for just being a relay and not having a tx of their own. There are plans to introduce a local FM-station operated by ex-Pacific DJs as well as a taped station.

(Wavelength No.4)

Remark from the contributor : have you noticed that this time there is only one P but no M and even no MP spoiling your reading pleasure (let's hope there is something like that at all) before you are struck by this item :

R.Pamela is not using the P.O.Box 5, Hunstanton-mailing address any longer. Instead, you can contact them at 82a Delce Road, Rochester, Kent ME1 2DH, England. A final 1 1/2 hours broadcast will be broadcast via R.Delmare shortly. A contributor from Sweden claims to have heard them on mediumwave (!!) on May 25th, 1985 on 1616 kHz at around 2130 UTC !!!!

Publications : -Pirate Info News intend to issue their magazine every two months in 1986 with about 30 pages packed with info each edition. Further details via the address two pages before. The next PIN is to come out in September.

-The KDKC (Postfach 450 663, D 5000 Köln 41, West-Germany) have recently published a "Free Radio Guide Jan '84 - March '85" in German containing the full story of SW-piracy under different aspects. The 60-page-booklet-type-publication costs just DM 10,--/hfl 12,-- or £ 3,--.

In Wavelength No.4, Adrian Cooke declares that at present he has no intention to release a fortnightly newsletter. However, the idea once was considered but found to be impossible to materialize for the time being. WL, by the way, now costs 50p in the UK or 3 IRC in Europe per copy. Address is c/o Hunstanton.

Starboard Sound c/o Salisbury, hopes to transmit every 2nd Sunday of the month but it is likely that the July broadcast will be missed due to GPO activity. In August, Starboard plans to be back with a special MOA broadcast. 6306 kHz is the station's current frequency which shall be kept for the time being.

Obviously, RT is read by R.Titanic International as they repeated their June broadcast June 23rd on 6240 kHz after some encouraging word from Hesse !

Trans World Radio has moved their outlet again and are now broadcasting on 6220 kHz as a replacement for 6215 in the past. (Maybe you have noticed that TWR Monaco has used 6210 and 6215 kHz in the past : might it be that they are on their way to jamm out Vatican Radio on 6252 kHz ?)

R.101 will probably appear on the new frequency around 7350 kHz over the first weekend of July. There might be a chance of extended broadcasting times some times, so listen out !

And here is a great QSL-card from a GREAT station :

pirate radio station
6252 & 7375 kHz

Hi there !

As I wrote last time, this is the issue before we go on holidays.
Therefore, RT No. 53 will be out three weeks from today, namely on
August 8, 1985, a Thursday.

Please note that no letters or questions coming in during this
period can be answered before the date mentioned above.

Happy reading with the 2nd anniversary edition of our infosheet !

As far as the QSL-corner is concerned, only one contribution has arrived :

Channel Radio 6300 kHz 21 days SAE sent QSL-card,pers.letter and "stickers" received

NEWS

Recently, a report for R.Apollo International was received via our address and, guess what , it came from India !!
As Dave Scott told lately, it was for the Easter Bank Holiday Monday transmission on 6206 kHz on April 8, 1985. At first he thought that this one was mixed up with the reception of R.Delmare (see later on), but in fact Delmare wasn't on that day. He instantly sent a letter and asked for more reception details and a tape. A hoax report seems unlikely as the report was postmarked the same day as Apollo was on the air - in fact it took about three months until the letter reached Bremen ! More next time !

R.Atlantis SW c/o Hunstanton & Bremen was on the air again July 17th on 6270 kHz introducing a new service for their Scandinavian listeners in the Swedish language. Furthermore, a parallel outlet on 41 metres was announced with 10 Watts while the 48 metreband rig was running with an output power of 80 Watts.

R.Bavaria recently wrote in and complained about a news-item in our issue released on March 13 stating that almost all what we wrote is false - well, we really would like to know what is false.
QSL's for reception reports concerning their x-missions as Bavaria sent to the Hof-address have been/will be answered "day and night behind the typewriter" "Reaching for the stars - Radio Bavaria" - a good slogan for a comeback ?

Channel Radio Int. (c/o P.O.Box 5, Hunstanton, PE36 5AU,UK), another station from the South-East, announced regular broadcasts every 2nd Sunday of the month 0900 - 1200 UTC. The frequency currently in use is 6300 kHz giving fair results.

Two items which came in from Delmare "powerhousing from Belgium" :

At first, R.Delmare would like to put a stress on the fact that they are, for one reason, broadcasting to jamm out AWR Forli....

Secondly, due to special propagation conditions, reception could give a problem in the nearer Antwerp area.

Last month, they received reception reports from as far away as India, Bangla-Desh, Iceland (not in the Indian Ocean -ed), Mauritius, and, last but not least, the Seychelles....
...where listeners received the transmissions on 6205 during local daytime. Since the last two months, the output signal on 6205 kHz has been increased from 150 to 1300 Watts and by the end of 1985, they hope to be on old 3000 Watts (as before) (well, they should also have raised the capability of the audio/modulator -ed).
In September, they are planning to reorganise the schedule for the 6205 kHz-service to be able to compete (!-ed) with other national shortwave stations.

R.Enterprise (Ireland) now uses the following mailing address :
c/o Willow Park Crescent, Glasnevin North, Dublin 11, Republic of Ireland. This address is also used by R.Ireland International which is currently testing weekly on 6310 kHz. Co-productions are also planned.

A mysterious Radio Freibier (= R.Free Alcohol) was heard in Northern Italy by famous Dario Monferini on the abnormal frequency of 4720 kHz ! Any details ? The station announced a West German location.

R.Joystick is a new station to transmit via R.Milano International every first Saturday of each month on 1301 kHz MW and 7295 kHz SW. More info are available for two IRC from Joystick, c/o RT-adr.

Funky Sounds for Central Europe - Radio Joystick

The Pirate Freaks Broadcasting Service recently sent in their first info-sheet in which they announced their first test (s) to take place soon. The PFBS has scheduled their next test (have there been any before ?-ed) on July 21st, 1985 on 6205 kHz at 0900 GMT. In case Delmare is on (to jamm out AWR-ed), frequency will be changed slightly. The PFBS can be contacted under this abbreviation at the RT-adr.

Rainbow Radio Germany, P.O.Box 725, Arnhem, NL intends to transmit on shortwave via a couple of relay stations in the not too distant future. (Comment of the contributor : "Erbarmen - zu spät - die Hessen kommen !!")

Radio 101, P.O.Box 2, B 4680 Gemmenich, Belgium, started its new broadcasting season July 6th with a test on 7340 kHz moving to 7350 kHz one day later. Several new DJs have joined the station including Johnny O'Brian (ex-R.Valentine) as well as Conny Ferrin (ex-Channel 292 & R.Wunderland Int), well-known for their past time activities.

The Satellite Broadcasting Company has been noted via the Dutch station R.Torenvalk on 1508 kHz on July 14th with a programme lasting one hour. SBC, Postbus 41, 7700 AA Dedemsvaart, NL is their address.

And now it's up up and away into the holidays !

Have a good time !

07-08-1985

Hi there, fellow-contributors !

Having returned from my holidays, I found a rather full P.O.Box with lots of contributions, reports, and so on in it. Be sure, your reception reports are forwarded today, too, so you shall be having your QSL's soon. As we are not on a 3-week-turn now (as you might have expected...), the next deadline is on August 22, 1985 (Thursday).

The LOG - SHIT (a suggestion by one of the above fellows, hi !)

R.Delta (Ruurlo)	1617	8	SAE+IRC	QSL-card,sample-QSL,pers. letter,4 stickers,IRC re.
R.Delmare	6207	9	2IRC	QSL-card,sales info,pers. letter
FRSHolland	6207	31	IRC	QSL-card,pers.letter

Now the NEWS. When nothing different is added, time is in GMT !

Let's start with a new magazine which reached the "office" here from the Republic of Ireland : AIRWAVES, the name of the mag is, and in fact it is not really new as issue no. 3 was sent in. Size of this is A5 and contains news from Ireland, the UK-local-FM&MW-scene as well as a SW-corner, some sort of compilation of news that have been issued in 2-3 magazines before, that all on 10 pages. Address is : AIRWAVES IRELAND, c/o 6 Mount Joy Parade, N.C.R. Dublin 1, Rep.of Ireland. Please tell them that you have got notice from them via RT. Thanks.

Here is the current BRI schedule that has just been received :

0827 : Free Radio News Preview	1000 : English service by the new DJ
0830 : German Service	Simon O'Neil
0900 : Roger Davis	1025 : Mailbag
*****	1045 : Jayne
Also, offshore-flashbacks	1120 : Norman Nelson
within the Roger Davis, Jayne,	1205 : Free Radio News Headlines
and N.Nelson shows are possible	1210 : c/d

Channel Radio International, P.O.Box 5, Hunstanton, Norfolk PE36 5AU,UK, may change their frequency to 6200 kHz for their August broadcast next Sunday (the 11th). CRI's July broadcast was maredby bad conditions resulting in two letters being received only. An extra-test transmission was put out on July 21st on 6300 kHz 1015 - 1100. Besides, the station is looking for new DJs from the continent preferably who are able to produce one-hour-shows once a month in English, Dutch, or German. Anyone interested should write to the above address as soon as possible.

Crystal R. 190 Monument Road,Edgebaston,Birmingham B16 8UU,UK,celebrated their 1st birthday June 23rd and intend to continue with by-weekly broadcasts on 7375 kHz. July 21st saw the introduction of a German service presented by Marc Jones who some of you may have heard in the past under a different name.

R.Earth, P.O.Box 321,Chicago, Illinois 60666, USA, announce a current schedule of 0800 - 1000 on 7295 kHz via R.Milano Int'l. Weekly 6-hour-broadcasts shall be aired via RMI from September onwards although the exact transmission times are not fixed yet. The poor sound quality of some of the programmes are because of the bad quality tapes sent to Milano from the USA (!!) according to a well-informed source.

The P.O.Box 319 at Edenbridge has closed completely by the end of last month.

Don't forget that the FRSHolland (Dedemsvaart) will be celebrating their 5th birthday August 18th. Listen out for something special to come up then...

R.Freibier (c/f RT 52) wasn't heard by Dario Monferini himself but by a reporter from somewhere in South-Germany. Dario hopes to get a recording of that station now as there is existing one.

R.Ireland will soon change their mailing address definately to the following, now only used as a second address :
c/o 442 Hartstown, Clocilla,Dublin 15, Republic of Ireland.

R.Joystick (Bremen) wasn't relayed by R.Milano Int on August 3rd. Brief test IDs were heard via RMI on both July 21st & 28th around 0800 in German. Just to remind you : this project hasn't got anything to do with a station called "Funkysound" that appeared in 1984 on RMI (...and which still hasn't replied to letters), in spite of Joystick's slogan "Funky Sounds For Central Europe" (c/f RT 52).

On Saturday, July 6, 1985 KIWI was closed down at 0550 pm by Post Office and Police officials. KIWI is making every effort to return to the air as soon as possible, hopefully by the end of the month. KIWI will be pleading not guilty on any charges brought against them on the grounds that the radio spectrum is part of the natural resource and that all New Zealanders have the right to use it without hinderance. Free Radio should not be state-controlled or monopolized.

More shows of R.Marabu (Bremen) are planned for the end of August/ beginning of September via Delmare and maybe also other relays.

KBC R. (sorry) P.O.Box 725, Arnhem, NL, recently told that relays over Radio 101 will continue for the time being with shows of Tom de Wit, Peter Verbruggen, and Danny Kay. Furthermore, KBC is still using their own facilities with irregular transmissions on 41 meters. The station is at present looking for new DJs but and may we quote :

"Only if you speak the english language for 100% and you can make a super programme you are welcome." Any questions left ?
Oh yeah, if you want to find out what it's like to read 100% English, read the KBC-newsletter, available for a couple of IRCs at GN Prod., PB 38, Ederveen/NL.

Still it's not enough nonsense for this time as here is another item about R.Pamela (Worldwide) : despite the announcements in their most recent broadcast via Delmare their current address is nothing else but 82a Delce Road, Rochester, Kent ME1 2DH, UK. Apart from that, Pamela also intends to transmit 0000 - 0100 on 1089 kHz after BBC R.1 has signed off on different days. Also 6515.5 kHz may be used.

R.49 International returned via R.Milano Int ! The first transmission was aired on August 3rd 0730 - 0900 (roughly), and they (he) hopes to be on the air every first Saturday of the month around that time.

R.101, P.O.Box 2, 4680 Gemmenich, Belgium, is also active on 27035 kHz on Sunday mornings in parallel to 7350 kHz as often as the sporadic E-layer allows. This has been the case on July 14 and again July 28. ERP on the CB-QRG is 280 Watts at the moment.

R.Rainbow International " from the East coast of Ireland" did pop up quite often lately on 6240 kHz announcing the following address : c/o Heady Eddie, The Village Hotel, Bettystown, Co.Meath, Republic of Ireland. The arrival of that station (or was it a revival ?) has been noted with apprehension by Rainbow Radio (Germany) which uses the Arnhem P.O.Box-address and is quite active on the FM band somewhere in Germany... That latter station intended to be relayed by a couple of SW stations in the future.

R.Titanic International, Postbus 41, 7700 AA Dedemsvaart was logged on July 28 with a one-hour-show hosted by Tim Cooper on 6280 kHz. They also sent an info to RT to inform their regular listeners that all reports received will be answered as soon as possible - the delay was caused by staff-holidays. RTI will celebrate its 10th birthday in autumn this year and they offer a special QSL-card and mini-poster (see next RT !-ed) for these transmissions, also an actual info-sheet is available. RTI asks for reports to complete for the 600th listener ! One contributor suggests to send birthday cakes (with candles, of course) "...who knows, they might give you something back ?..."

R.Waves Int, B.P. 130, F 92504 Rueil-Malmaison CEDEX, France announces that it is on the air 2-3 times per month on 7340 kHz with low power. They are looking for a new frequency in the 48 or 41 mb. Furthermore, RWI has organized a pop-poll of FM, SW, and MW stations (Free Radio) called FFFR / TOP which will last from 01-09- 31-10-1985

And that ends up RADIOTELEX for this time. See you in two weeks !

22-08-1985

Hi folks !

The outside weather conditions are quite bad at the moment (rain and other nasty effects...) , in other words : why not stay inside and compile your valuable contributions for RADIOTELEX ? Well, some of you did so already and I am proud to announce that we will offer you in the following what DX-ers call a "great log". Enjoy the following UK, CON, and, thank you very much especially, SCA observations !

NEWSSECTION

To start with this time, news has reached us from the FREE RADIO NEWS No. 11, that R.Action has this mailing - address : c/o Postbus 10, Creil, NL. According to the quoted FRN-issue, that station started broadcasting on August 11, 1985 and has so far been heard on 6298 and 7290 kHz. We therefore wonder who has heard this one as the station doesn't appear in the log of this RT ?!

May we draw your attention on next Monday, August 26, 1985 when it's going to be a Bank Holiday Monday another time. Stay tuned for some UK-goodies !

Britain Radio International (Utrecht & Salisbury-adr) will be back August 25 as printed in RT 53. Simon O'Neil, by the way, will present the Free Radio News programme (not an "English service").

Crystal Ball is the name of a new magazine dealing mainly with the pirates in the West Midlands on FM/AM and SW. Issue No. 1 is send free upon request (in case you haven't got a copy); No. 2 which shall be out in September costs 10p + SAE or 23p (2 IRC on the continent) and the address for your inquiries is 190 Monument Road Edgbaston, Birmingham B16 8UU, England. The newsletter is not connected to a particular station in spite of the name which may remind somebody of a certain station...

R.Curaçao, a Dutch medium wave operation, has the following address :
A.Wessels, Kruisselt Laan 14, 7587 NM De Lutte, NL.

Electronic Sound Transmission, a station from Birmingham that used to transmit on 41 metres some time ago has made its last broadcast on FM, Easter Monday.

/R.I.P. (Crystal Ball No.1)

Falcon Radio can be contacted at the following new address : c/o IRRS (International Radio Relay Service), 58 Seagrang Road, Ballydoyle, Dublin 13, Republic of Ireland.

The Free Radio Service Holland has celebrated their 5th anniversary with a special line-up of programmes on August 18 and a programme-tape also aired via KBC-R. on 7315 kHz. A special anniversary contest has been organized and several valuable prizes such as video-tapes, T-shirts, and cassette-recordings will be raffled off. All YOU've got to do is to write 10 names of people involved in FRSH (DJ-names, please, ...) past and present (but not future !) on a postcard and to send it off to Postbus 41, 7700 AA Dedemsvaart, NL.

A letter sent to R.Ireland International at the end of July addressed to Willow Park Crescent,) has been returned with the remark "insufficient address". Meanwhile, another letter has been send to the station using their new address as printed in RT 53 which is : c/o 442 Hartstown, Cloncilla, Dublin 15, Rep. of Ireland.

Radio Pamela, 82a Delce Road, Rochester, Kent ME1 2DH, England, is currently active on 1615 kHz (and not 1615.5 as printed last time...) during nighttime hours and has been audible there on the continent lately. Local QSO-ing (under a different name ?) is also done on 6664.5, 7655, 8005, or 9235 kHz. Meanwhile, R.49 which did return via R.Milano Int on 7295 kHz in August announces the following address : c/o (pencil and paper ready ?-ed) 3 Rosewarne Cottages, Rosewarne Downs, Near Camborne, Cornwall TR14 0BE, England.

The PFBS (no, not BFBS !-ed) or the Pirate Freaks BC Service has informed us that their 5th test-transmission has been made on August 11 on 6206 kHz at 0800 and 0900 and on 6204 kHz at 1110, every broadcast lasted 30 minutes. They also tell that they are having enormous problems with their antenna which might be the reason why nobody has heard the station that far but the staff hope to solve the problem soon. Anyway, in case you hear them the next Sundays when more tests will come up, the address is c/o RT.

Radio 101 (Nijmegen) is still alive and kicking on 101.6 MHz FM stereo; however, there's no use to try and phone them up as their telephone lines have been cut off as they didn't pay the post office's fee. Incidentally, 101 was audible again on August 18 on 27035 kHz in Central Europe, so if you can, listen out for them on Sunday mornings. News has reached us from the UK (and other places as well regarding the slightly changed frequency) that their SW-transmitter usually in operation on 7350 kHz has developed spurious emissions, so far observed some 70 kHz above the original outlet, on 7422 kHz.

R.101 continued...

That reminds me of a station heard some years ago, in 1982 or so, called R. Poacher Int'l which also had the same effects but also 70 kHz below their frequency. Due to severe QRM on 7282 kHz, R.101 could not be heard down there. Also the modulation seems to be a bit distorted. Problems in the P.A. stage ?

After a long absence, another broadcast has been noted by The Radio Foundation via KBC-R. Address is : Vijverweg 8, Blomendaal, NL.

Rainbow Radio, Postbus 725, Arnhem, NL eventually received some mail for the transmissions of R. Rainbow Int'l from Ireland !

Rainbow (Germany) plans to come up on 6555 kHz later with an own tx; medium wave transmissions are also considered. Personally speaking, I can't understand why some people mix those two stations up; the difference in programming quality should be easy to note ! (says the contributor-ed)

Now R. Rainbow International (the one from Ireland) tells in a QSL-letter that they use a 80 Watts transmitter and a half-wave-dipole attached in a height of some 40 feet (=12 m) between two trees. The main apparatus in the studio are Sound Out disco-decks. Site is 4 miles away from Drogheda. Address: c/o Headie Eddie, The Village Hotel, Bettystown, Co.Meath, Rep.of Ireland.

Did you know already that the Rebel Radio Network broadcasts from the "MV OCEAN MIST" anchored off the Yorkshire coast....

The Skull & Bones Radio System can be noted with weak signals also on the continent on 6209.6 kHz or there around. The Address to write to the station is c/o Anoraks Ireland, 310 Collins Avenue West, Whitehall, Dublin, Rep.of Ireland. It is one of those tiny stations your sympathy is immensely stronger for than for another dull relay via powerhousing KBC or Milano Int., isn't it ?

On August 4, a relay was heard via the IRRS (see Falcon-news-item) called Starfleet Radio which was on with a German/English production and the following mailing address : Postbus 19074, 3501 DB Utrecht, NL. Time was 1100 - 1200 h.

R. Titanic Int will be celebrating their 10th birthday soon as this station started back in 1975 on the 24th of August ! As far as the material tells they recently sent when confirming some reception reports, a special QSL will be issued for the anniversary transmission. Dedemsvaart-address.

R. Torenvalk, Postbus 36, 7010 AA Gaanderen, NL, one of the Dutch stations that broadcast on 1508 kHz has sold their 500 Watts transmitter and is constructing a new rig for using it on 1094 kHz in Autumn this year. The transmitter has been sold to a station by the name of R. Pelsjager which shall pop up on 1508 kHz in the near future. When looking at the loglist of August 17, 1985, on 1094 kHz occurs a R. Firelight and also the above mentioned Torenvalk. What about speculating which station used what transmitter under what name ?

Wings of Healing, one of the dull relays I mentioned above, uses the following address : P.O.Box 77, Los Angeles, CA 90051, USA. Don't write to them.

And the final item, transferred to RT just a few minutes ago per telephone, deals with the Dutch R. Delta from Ruurlo : They plan to have their next appearance on 180 m, MW, on September 1, 1985. Frequencies used so far : 1612 + 1619 kHz, address : Postbus 65, 7260 AB Ruurlo, NL. 0000 - 0100 UTC, their schedule tells.

See you later, DX-er !

05-09-1985

Hi, you all around !

After last week's bumper issue with logs and many news, now (again)
one of the 'low' middle class editions we unfortunately are used to stick
to sometimes...

Well, thank you anyway for your help.

One more word about ourselves :

a) Although at some stage we thought that there wouldn't be ever a
single reaction on our SAE-service (you know : send your stamps
and you will receive mint ones of different countries), there is
a huge need for it (as it seems, at least) the last months.
We are happy to inform you that our stock is well equipped with
22 p stamps of the UK, so no problem with that. Holland, unfortunat-
ly, is a slight problem nowadays - we will, of course, have solved
this soon - ready for your orders of 70 cents stamps again !
There are a few ones left of Ireland. If there should be any need
for those, please feel free to ask us !
France, finally, has been erased from this service as almost no
orders came in for 1 1/2 years, so the editor labelled them on
his picture postcards this year when on holidays in Britany, hi....

b) By the way, I'm enjoying a delicious fruit-salad at the moment
whilst typing this !

c) Next edition, No.56, normally would come out on September Na-na-na-
na-nineteen (19), 1985. Well, as we won't be in Germany then,
No. 56's deadline is September 15, a Sunday (!!!!!). Any telephone
calls concerning logs and news are welcome ! Please write in the
week before with logs of next weekend (September 7/8) also mentioning
your phone number. We will possibly be contacting you on September
15 between 1200 and 1300 UTC ! Come on, you people from Scandinavia,
the UK, and Germany, let us phone you !

The logs.

Time is UTC !

TELEX TELEEX TELEEX TELEEX TELEEX

R.Titanic International in fact made it almost to the date and celebrated their 10th anniversary on September 1 with four different shows on three different frequencies as some contributors told us. They promised to send a special QSL-card only issued for their birthday when sending a reception report. Address : Postbus 41, 7700 AA Dedemsvaart, NL.

And finally : R.Woodstock (good old Luis ?-ed) announced to come back next year again and also mentioned the old , private address of 23 Simpson Street, Falkirk, Scotland..

And that ends up the logs and news we have this time, an "acid-cucumber-time" like one contributor suggested....

Anything to add ?

Bye and FFFR,

RADIOTELEX

15-09-1985

Hi, Sunday listener !

The last station disappeared just an hour ago and now it is over to the typewriter, "the good ole thing", to compile RADIOTELEX. As we have mentioned in no. 55, we will be away for 10 days or so, a reason that forced us to release this issue today, on a Sunday. Nevertheless, we will be back (hopefully) on the no. 57-deadline, i.e. on October 1, 1985 (a Tuesday once again, as in the old days when we started.) Yes, we have thought it over and found out that it will be better to come out on that weekday....which implies the question: "Who will contribute then?" There have been some difficulties every-time especially with the people from Scandinavia whose letters, posted on Sunday, normally reached us on Thursdays or even later in the week, in fact too late for an actual RT. We now offer to one person to phone us every second week and therefore, the person reporting to us will receive RT one year free of charge (only valid for Scandinavia!).

The Logbook. Time is UTC.

Newssection

One correction to a newsitem we printed in RT no. 54. It concerns R.Action. RA did not start broadcasting on August 11, 1985, but on July 30, 1985 on 6298 kHz as reported in RT 51. The August date was meant as a preview or scheduled broadcast to come. Their new address is : P.O.Box 10,Creil,NL. RA's second transmission was on August 11 on 7290 kHz.

Radio Joystick, c/o RT, had their official opening over R.Milano's transmitter on 7295 kHz on September 7th 0800 - 1000 and intends to continue with regular broadcasts each 1st Saturday of the month at the time slot given above. DJ Charlie Prince announced that Joystick tapes may also be repeated sometime during the rest of the month, so watch out for them.

R.Pamela, 82a Delce Road, Rochester, Kent ME1 2DH, England, plans to carry on with a number of relays on shortwave thanks to good response for their current broadcasts (via Delmare). The musical format is at present based around rock and soul sounds (the other project R.49 features mostly oldies (musically or do you mean the DJ ?-ed)). A new QSL-letter (yes, a printed one !) has been released lately and is available for a correct report plus SAE / 2IRC.
(Wavelength/P.I.N.)

Of course, recent mediumwave-emissions came via the Dutch R.Torenvalk on 1615.5 kHz and 1094 kHz.

Did YOU know that Radio Milano Int is able to transmit on 3 frequencies with one transmitter simultaneously ???

(quoting Roger Kirk)

Starboard Sound have recently been raided by the Department of Trade and Industry and they also visited the operator's house looking for documents etc... They also told him that they would be investigating both P.O.Box 5 and Norman Nelson. So things are not rosy, this is why BRI has been silent on August 25, 1985, he's lying low, of course. Also the operator of Atlantis SW tells that he will only close down the station when things are worse than he can bear. And also R.Apollo has been affected by the DTI-mania though no one has been identified in this case.

Any station out there wanting a telephone - service during their transmissions ? Write in to RT!

R.Universum has a FM-service on around 102 MHz at 1900 local time every Monday since September 9, 1985 for the greater Koblenz area in South-West Germany. By the end of 1985 /beginning of 1986 they plan to come on also on shortwave 6297 kHz. c/o RT is their address.

Vatican Radio (you know their motto : "Dope to the Pope - Acid to the Knesseth") did not reply to the two RADIOTELEX issues 50 + 51 that both were sent to the technical department of that station yet. Perhaps they will close down voluntarily on 6250 kHz ?

RADIO 101

Another photograph from our "Shooting the equipment"- section. It shows the transmitters of Skywave R. International from Ireland (the left one), in the middle, a power supply can be seen when closing your eyes, and on the right hand side, finally, is the 30 Watts rig of the R. Universum talked about overpage. The Skywave unit, by the way, is 20 Watts and has an external modulator while the Universum-tx has a built-in modulation-amplifier.

Well, what remains ?

Not much, really. Only thing to add is the brandnew PIN-magazine that is due to come out next week or so. Don't miss what certainly will become lots better than the KDKC "DX-special". Write for a sample copy to P.I.N - Pirate Info News, c/o Postfach 220 342, D 5600 Wuppertal 22, FRG. Send in DM 1,50 in stamps or 2 IRC.

See you on October first !

Stay happy + 73,

RADIOTELEX **RADIOTELEX**

*RADIOTELEX is a Free Radio guide to shortwave Free Radio but it may also occur that we are reporting about mediumwave or even FM-services when considered interesting. OK ? If not, why not write in for a sample copy ?

01-10-1985,
 Tuesday

Good to speak to you through this info again !

Having been away to the States (unfortunately...!) the last two weeks,
 I had better remained at home listening to the airwaves... silly me !
 Well, what's 'in' this time ?

I hope a lot more interesting bits than the 2 or 3 previous times,
 I even didn't dare to post No. 56, hi ...

O.K., may I introduce a new RADIOTELEX - service to you (well, that
 came into my mind when being in the US..) :

Any station out there looking for a telephone service during its (or
 if there are several interested : their) programmes ?

Advantages : when phoning RADIOTELEX-phone-in after having heard the
 number announced on a certain station, this "reception-report" can be
 forwarded to that station within, let's say, 30 minutes and informs
 the guy behind the rig whether it'll be better to change the frequency
 or whatever.

Write in , please, what is your opinion on that suggestion ?

Anyway, also inquiries rom stations are welcome ! Spread the word !

Let's open the logbook now after mentioning the next deadline :
October 15, 1985, Tuesday again.

21-09-1985, Saturday

NEWSSECTION

time is UTC !

R.Atlantis SW, c/o Bremen & Hunstanton, hopes to be back on the 1st Sunday of October on 48 metres, 6260 kHz, or on October 13. In case R.Skywave is on the air, the frequency will of course be changed.

ctd...

Atlantis SW ctd...

It will then again be possible to enjoy one of R.Marabu's programmes, too (c/o Bremen).

R.Big Lizzard made a test-transmission on September 22 on 6285 kHz and announced the following mailing address :
J.-L. V., 2 avenue du Vieux-Moulin, F 62 630 Etaples, France.
Hopefully, this one will be back soon as it is the one I missed, you know, while being in the US...

It seems to be extremely clever to put in the following item after the preceeding :

Jean-Luc Vigie (sorry, can't find his adr) is looking for people which can send him Free Radio recordings, especially little station-portraits on cassette, lasting 15 to 30 minutes. Anyone interested ?

R.Calabria Internazionale, a new private station from Southern Italy, is said to have been testing daily 1230 - 1330 UTC on 13630 kHz with 250 Watts. Address : RCI, Via Sarpi 23, I-89042 Giosia Jonica (RC) Italy. Anyone out there who heard this ?

(reported by WDXC, Media NET + PIN)

R.City International, the station run by the Swiss SW Club, planned to test September 29th on 15030 kHz 0800 - 1000 UTC in English and German with 1 kW & a dipole aerial from Italy. This station has been reported to start testing about two years ago at what time nothing materialized. The following address was announced back in '83 : RCI, P.O.Box 1118, CH-8036 Zürich, Switzerland.

Crystal R., 190 Monument Road, Edgbaston, Birmingham B16 8UU, UK, tested a couple of months ago with a new 50 Watts rig capable for 48 and 41-m-transmission. The test carried out on 7350 kHz unfortunately didn't produce any reports except for a log by a Scottish reporter of Anoraks UK. Crystal is also said to have put out a programme by the Rebel R.Network on September 22nd... extremely mysterious

Flash - 1610 is the name of a new medium wave operation intending to transmit their first broadcast October 12 this year on 1610/15 kHz 2200 - 2330 UTC via an own tx-facility, not via a relay station. Their address is Postbus 760, NL-6221 BP Maastricht, Holland. In case the editor combines this item with another (which has to be kept as a secret...), it may also occur to hear this station also on shortwave, both transmitters have a power of 1 kW, when I'm right and also relays of a well-known station might be possible....

FRSHolland, Postbus 41, NL-7700 AA Dedemsvaart, NL, had their 5th anniversary shows repeated September 15th over Delmare as a substitute for their regular programme schedule. FRSH plans to continue regularly on the 3rd Sunday in October with a new schedule lasting a total of 6 hours. Their "FRS Goes DX" magazine which suffered from irregular release dates in recent months may find a slight change in the near future (i.e. 8-10 mags instead of 12 per year but with more pages included).

R.New Civilisation is a quite new station which started via R.Milano's transmitter on 7295 kHz September 8th and was heard again with another broadcast a fortnight later. Perhaps anyone could come up and figure out how to define the announcer's accent and the sort of music they tend to play. Just to give you an imagination of what that is like : they recently put out a programme entitled "Third World War" (ed: That station must be sponsored by Ronny !?!) You may contact RNC at this address : c/o RMI, Via Locatelli 6, I-20124 Milano, Italy.

We last time unfortunately forgot about the news on the Pirate Freaks Broadcasting Service.

ctd...

PFBS ctd...

This station who used to operate a re-built ex-army BC 1310 transmitter (you know, those rigs which always fail to function...), has scrapped the equipment now trying to rebuild all parts soon. For the time being, the PFBS has stopped any test-transmissions.
c/o RT

The Rebel Radio Network kindly sent out "memos" to anyone who has written in (I suppose) which reminded some individuals of a certain well-known SW station with studios in California and transmitters in Florida... oh well, in case you really want to take part in the real fight for free radio, the memo tells you what you've got to do : write back. By the way, RRN is currently relayed in Europe every Sunday 1000 - 1100 on 6290 kHz and is also heard via KIWI from New Zealand. Here is an actual comment on the RRN, released in FRS Goes DX No.38/39: "And what about the return of WRLI/GLBC ??? It has been very nice and exciting but it seems as if RRN's John England is nothing but a liar. He likes to get a lot of publicity, that's all !" I suggest to release a schedule of the MV "Ocean Mist's" sailing-plan. We then could certainly arrange sightseeing tours to that spectacular boat...

Riverside Radio Int which has been heard on September 29th on 6240 kHz and may be the station that replaced R.Rainbow Int, has the following address : P.O.Box 39, Waterford, Rep. of Ireland. Reported to have 5 Watts, located somewhere in Central Ireland in a remote area.

Quotation of the fortnight:

"To be (a RT-reader) or not to be, that is the question."
(Sorry, William !)

Some items from the medium wave stations now :

R.Hotel Amigo and Radio Waddenzee were heard both on 1094 kHz (!) September 22nd.

One week later, Sept. 29th, Radio Torenvalk came up on 1094 kHz announcing that the following Sunday morning (October 6th) they would transmit on 1508 kHz while R.Black Hunter would use 1094 kHz.

R.Orang Utan shall be back on 1508 kHz October 13th, by the way. A few more addresses which may have been unknown to you :

R.Pelikan, Postbus 166, 7240 AD Lochem / NL

R.Wodan, Postbus 6023, 4000 HA Tiel / NL

R.Alpenkruiser, Postbus 6, 7918 ZG Nieuwlands / NL.

The latter station is on the air every Sunday at 1000 on 192 mts.

Starfleet Radio , Postbus 19074, 3501 DB Utrecht / NL, which is at the present time relayed by the IRRS plans to be relayed by R.Mirage Int in October. Keep you fingers crossed....

Please remember to try for Sunrise R. on October 6 on 11416 or 11430 kHz.c/o Dedemsvaart is their address and they'd love to hear from you

The final message today comes from R.Titanic Int : they gave the information that the first package of letters with 25 reports were received from the Dedemsvaart-address for their birthday party on Sept 1st. Anyway, the OPs know that many more listeners heard this but just did forget to write in , so the staff asks for those reports and offer again a very special QSL and poster. The letters will be answered until the end of October - please remain patient !

And that ends up RT No. 57 - a good lot of items this time !
Thank you very much !

73 + FFFR,

15-10-1985

Hi to all around !

And this another time spills out of my head on some sort of an evening-
 shift , actually now it is 19.00 local time and some kind of dark out-
 side (autumn is near ...) but, fortunately, I have found a light-bulb
 somewhere to make things clearer. Well, stop those minor items now !
 An info for people waiting for their Dutch stamps : They will be send
 off by the end of this week, sorry for this delay but we recently had
 some sort of a massive run on those goodies. A good moment to remind you
 guys (in fact, there isn't ONE YL except for Ruth of Anoraks UK...) of
 mint UK-stamps which you can swap with your stamps .

Next deadline is October 29, 1985 (TUESDAY !).

The Logbook. Time is UTC as ever.

NEWS

To start with this time, here is a clue on the mysterious R.Action noted in the logs of October 6 on 7388 kHz. By the way, this one was reported back on August 25 on the same frequency but with a lot weaker signal then. It is not known whether the name is "R.Action" or has just been derived from a very well-known FR-jingle. Write in, please, in case YOU have a clue.

R.Armada, Postbus 9, 815o AA Lemelerveld/NL, recently announced plans to transmit on short-wave (623o and 73oo kHz are being considered). Further medium-wave broadcasts shall be put out on 1616 khz. This, finally, gives the solution to that rather confusing sentence printed in RT 51; let's just hope this doesn't mean yet another Flying Dutchman jamming the bands again.

You may have already started wondering where R.Batida has been the last months - well, here is the exciting answer to that question : R.Batida has ceased transmissions due to personal reasons (being not enough leisure time to do shows, etc...) The OP will be working, as he tells, at various private radiostations in Bavaria (Jodel !-ed) in the near future and also /or Baden - Württemberg - that means no more Batida! The next step is, consequently, that the address service is stopped from now on. OP Michael kindly asked us to release the following advertisement for him :

"FOR SALE : SHORTWAVE TRANSMITTER, TUNABLE BETWEEN 1.5 AND 7.5 MHz, VFO-CONTROLLED (however very stable-ed) with an ACTIVE ANTENNA-TUNING-UNIT for any wire with resistances from 5 - 3000 Ohm. OUTPUT POWER : approx. 70 Watts RF, inclusive Power Supply Unit to operate the rig from the mains. Price : DM 800,-- is suggested, depending on negotiations. Please phone Germany- 05136 - 2361 and ask for Michael."

Britain R.Int has suspended all broadcasts for the time being due to various problems. However, BRI wants to return as soon as possible when all these are sorted out. Any listeners letters demanding a quick response are welcome at Postbus 19074, 3501 DB Utrecht, Holland or c/o 32 Victoria Rd,...

Probably, an info-broadcast will be transmitted on the 4th Sunday of October to reason the momentary silence.

Crystal R. has been heard with very sufficient reception in Germany last Sunday, October 13 on 7375 kHz also with an excellent German show. As Mike Collins informs, a new frequency shall be tested in the near future - planned is 7390 kHz. Address is c/o 190 Monument Road, Edgbaston, Birmingham B16 8UU, England.

The Dansk DX Lytter Klub has issued a brochure consisting of 28 pages listing 100 Danish community stations. The list is available for four IRC at the following address : DDXLK, P.O.Box 392, DK 8100 Aarhus C, Denmark.

R.Delmare recently announced on the air that the modulation, which has always been the crucial thing about Delmare, has finally been improved (which can be confirmed !-ed). The fault was a tiny valve in the modulation stage of the transmitter which didn't work O.K.

The news released by the Free Radio Fanzine stating that Delmare plans to sell their transmitter is not right. Quoting a certain person : "Who says such foolish things ?!"

The IRRS (International Radio Relay Service) has changed its address and therefore, also the following stations can be contacted at : P.O.Box 1686, Dublin 1, Republic of Ireland. Falcon Radio +R.Skywave Int.

News from the Netherlands :

Rainbow R.(Germany) has been active on October 9 on appr. 1615 kHz for at least three hours (23.45 - 2.45). Also R.Casablanca Int has been active then, of course they own the transmitter via those programmes came.

Some addresses :

R.Alpenkruiser, Postbus 6, 7918 ZG Nieuwlande, NL (active every Sunday at around 1000 on 192 m)

R.Wodan, Postbus 6023, 4000 AH Tiel, NL

Netherlands - info ctd...

R.Pelikan has announced a new address : Postbus 166, 7240 AD Lochem, NL. Frequency: 1612 kHz.

R.Nooitgedach, Postbus 186, 7240 AD Lochem, NL, noted on despite reports in the Free Radio Magazine saying this station has closed.

If you like it to laugh (and I guess you like !-ed) here is some mental disturbance from R.Pamela :

They said that he will be on shortwave in 2.5 - 3 months time using either of the following frequencies : 6200.4 kHz , 6351.6 kHz , 6741 kHz , 6815 , 6868, or 6970 kHz so watch out for those (some odd frequencies for SW-DX-ing, the reporter adds ...) The station may even be going on 31m or 25m (possibilities too numerous to mention here-ed). Local transmissions are planned as soon as they can find a 500 Volt power supply. The tx Pamela uses at present (catch your breath, ed) is 260 Watts (input ?-ed) together with a half-wave dipole or long-wire.

PFBS , the Pirate Freaks BC Service, c/o RT-adr, has no immediate future plans for further transmissions. Unfortunately.

Riverside R.International is, as we are told, ABC R.Waterford's new or SW-name. Anything to add ?

R.Skywave Int will soon change its QRG to a 41m band - one. P.O.Box 1686, Dublin 1, Rep.of Ireland, as previously mentioned.

TransAtlantic Free Radio (c/o Bremen-adr) is a relay-project for US-stations wanting to aim one or several broadcast (s) to Europe and, vice versa, for European stations which like it to be heard in the US. In case you hear TransAtlantic FR, use the above address or the following one : P.O.Box 110, Johnson City, N.Y. 13750, USA.

R.Tutenchamun (c/o Bremen) will soon be relayed by KIWI R. in New-Zealand. Unfortunately, the first cassette containing the programme to be relayed has been sent to NZL by surface mail which will probably make the tape arrive in some 5 months time.... Tutenchamun is also looking for a chance to be relayed in the US (see before !-ed) and has therefore contacted the Voice of Tomorrow. Furthermore, transmissions are planned via R.Milano International, however nothing has come out of these negotiations as of yet. Anyway, Tutenchamun promises to inform us (and our readers) in time. Thank you very much !

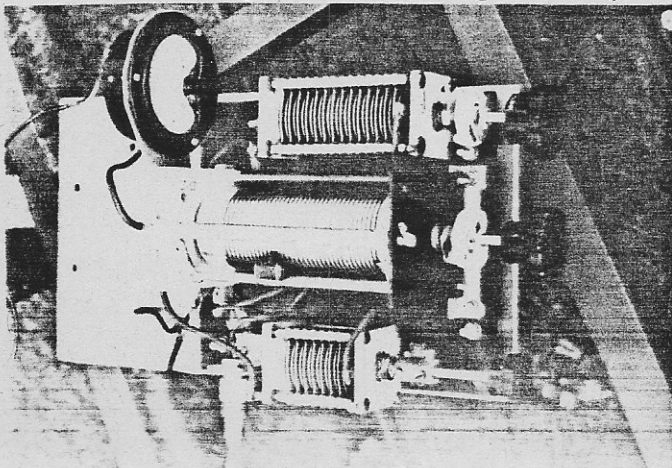

R.Zeta Int has been active on September 8, 1985 on 7423 kHz at 1100, with fair to bad signal received in mid-Germany.

Here is their address :

c/o Bill Kirkwood, 28 Clyde Park, Hailsham, East Sussex, UK.

Great stuff, those rare stations !

To come to an end for today, here is a shot of R.48's whip-antenna-tuning-unit (what a word !-ed) 48 also tells that those whips are quite ineffective and that future plans consist of feeding the antenna with more power next time, to improve the signal. Bye for now !

Look from
this side,
please!

- Bottom -

Stick a pencil
in here!
Convenient, isn't it?!

29-10-1985

Hi Free Radio-believers !

Nice to write this info another time, yes, it really is a lot of fun (and has been also for some time now...) compiling this now. You have learn to see the value of little successes soon when you have to do this work every fortnight and, I can tell you, it has not always been encouraging doing RT. For all those of you who are waiting patiently for their Dutch stamps, please remain patient. Thank you !

Deadline for No.60 is November 12, 1985 (Tuesday) !

Logbook. Time is UTC !

The Pros and Cons of Free Radio in the 60 metre-band

This is some sort of short essay on how Free Radio could develop in the near future.

Have you seen the logs of Pirate Freaks Broadcasting Service on 5203 kHz on October 27th ?

Unusual ? Well, it makes sense when you consider the signal strength (the whole SINPO was 4/5 4/5 4 4 4/5) and that reception was possible at the same time in many different locations. That proves a very short skip zone since the transmitter is near Hamburg, W.-Germany. Propagation was very different compared with conditions in the 48 m-band where tests were carried out at almost the same time; fading, for instance, didn't occur at all on 60 m while there was an apparent fade out on 48 m before.

Future will show whether other stations will try the same for the advantage of better reception around 5.2 MHz.

Disadvantages are : a) for the operators : Antennae are slightly longer than those for 48 or 41 m. Really a problem ?
b) for the listeners : in case they haven't got a special receiver, they are unable to pick up signals below the 48m range. On the other hand, most DX-ers have equipment ,that well covers also this spectrum.

One should not forget that more and more broadcasters are now changing to the 41m and 48m band for the advantage of better propagation. Soon, the "pirate bands" will be 'contaminated' with those emissions from the powerhouses (as there are Vatican, AWR, probably World Music R. soon,and, not to forget, R.Delmare that splatters $\pm$ 15 kHz off the original frequency of 6206 kHz.

Let's consequently do the same - let's change the bands !

We like to thank every station for its initiative to make one step forward towards less spoiled reception. Any schedule will of course be reprinted in RT .

The Newssection

R.Aquarius Int,Postbus 628, 3100 AP Schiedam/NL, intends to test again on November 3rd between 0600 and 0700, next Sunday in other words. Although no exact frequency was mentioned, it may be a good idea to look for them around 7.49 MHz in the early morning hours. The Aquarius staff, by the way, also produces the Dutch service on R.Ireland Int; any letters regarding those RII-programmes can be sent directly to the above address.

R.Atlantis SW (c/o Bremen + Hunstanton) again is planning a special X-mas transmission on VHF, MW and shortwave and also a phone-in might be possible. Probably the first phone-in for the RT-phone-in-service ?

Wavelength No.6

Crystal R., 190 Monument Road,Edgbaston,Birmingham B16 8UU, UK, is testing on the new outlet of 7390 kHz "trying to get away from the

Crystal ctd...

numbers woman." Issue No.3 of Crystal Ball'magazine is out now and well worth reading (10 p + SAE in the UK; 2 IRC elsewhere).

R.Delmare announced a programme of R.Pamela to be relayed on November 3rd.

The new Free Radio Holland-schedule : 0900-FRS Magazine, 0945-FRS Golden Show, 1015-FRS Goes DX, 1100-Danny Kay, 1145-ILLS (Listener's Letters show) Part 1, 1215-Sounds Alternative, 1300-FR spot, 1330-Music Express, 1415-ILLS Part 2, 1445-FRS Goes Nuts ("15 minutes of nonsense on the radio"), 1500 - close down. c/o Postbus 41, Dedemsvaart. This schedule has been transmitted on October 20 for the first time and will certainly be kept every third Sunday.

R.Liberty Sound - LS, JLV, 2 Rue du Vieux-Moulin, F 62 630 Etaples, France is the name of a new French station which made its debut broadcast on October 27th on 6285 kHz. Actually, some people reckon that the broadcast didn't come over an own transmitter but was relayed by a Dutch station (guess which one)...

R.Rainbow Int, the "Head of Eddy", recently has been silent because the station was moving house, now their transmitter is near Dundalk Bay in Co.Louth. The transmitter-power is said to be 150 - 200 Watts.

Another station which had its first transmission October 27th is R.Scorpio of apparently German origin. The programmes that contained a lot of heavy rock stuff were relayed by R.Delmare; unfortunately, no address was announced leaving room for some detective work....

Starboard Sound was the victim of a mis-information in RT No.56, telling that the station had been raided - this is NOT true! (I'm happy to say! -ed). The station was on an engineering test transmission on October 27th producing a good signal on the continent but suffering from low modulation. c/o 32 Victoria Road, Salisbury, Wiltshire SP1 3NG, UK is the address.

Another station - another error : Trans Atlantic FR can be contacted via Bremen or via the US-address, which has the following, now correct, ZIP-code : 13790. Because I won't be accused the "numbers-man", here is the address again (that's a rhyme! - ed) : c/o P.O.Box 110, Johnson City, N.Y.13790, USA.

World Music Radio, P.O.Box 4078, Amsterdam/NL, plans to test with a one kilowatt-rig from Italy (not a relay!) very soon (November 3rd?) on 6230 kHz. This will mean : "Good-bye 6200 - 6260 kHz!"

R.Woodstock from Scotland has been active on 6210 kHz on August(!) 25, but could not be received in many places due to Skull & Bones covering this channel. Luis Nieto actually is planning to come back soon, probably by the beginning of 1986 ???

There is also the story of the "HA-HA-letter" received today from the Four Freedoms Radio Network but that REALLY is another story.... (excerpts of this may be printed next time.....)

Thank you for reading RT.

Until then, 73 + FFFR,

RADIOTELEX

Newssection

To start with this time, here is another advertisement from R.Batida,
sorry, ex-R.Batida :

"FOR SALE : FM-driver-transmitter, about 5 Watts RF power out,
frequency very stable, frequency 104 MHz for DM 100,-- Tel: 05136+236

R.Diamond is yet another new German station using the Delmare -tx and having their debut broadcast recently. The station was first heard November 10th for an hour with a show hosted by the DJs Wolfgang and Horst; any comments regarding the programme should be send to R.Diamond, c/o R.Delmare, Postbus 36, B 2050 Antwerp, Belgium. Please enclose 2 IRC.

As every attentive reader of this newssheet has probably noticed : "good old" Free Radio Service Holland was renamed "Free Radio Holland" in RT 59. Anyway, everyone knew what it meant, so just take it as a sign of the editor's creativity...

R.Pamela, 82a Delce Road, Rochester, Kent ME1 2DH, England, plans to have a full 6-hour-broadcast aired over Radio Delmare very soon. Tiny QSL-cards are now also available from the above address.

Any listener curiously standing by on medium & short wave November 10th could have hardly missed the relay broadcasts of the Satellite Broadcasting Company; on 1094 kHz Radio Torenvalk put out a show at night while the following morning another Mikel Air - production was aired on 6285 kHz. The SW-relay is said to have come from R.Hotel Amigo which seemingly wasn't standing by for a QSO afterwards. SBC now has got a new mailing address (paper and pen standing by?): c/o Postbus 36, 7010 AA Gaanderen, NL. Further relays should follow shortly.

News has reached us telling that the one and only Sophisticated Radio System will pop up on the 48m-band on November 20th, 1985, a holiday all over Germany. The exact frequency and transmission period is not known yet, but they already have an address : c/o Postbus 41, 7700 AA Dedemsvaart, NL. Charles "Sophie" Humbucker will be so happy to act as your host on that very day.

Starboard Sound now employed a second transmitter and tested it for the first time last Sunday, November 10, 1985. This is said to alternate with the former transmitter every now and again from two different sites.

R.Titanic International which recently answered the mail received for their birthday transmission (postmarked in Duisburg this time, by the way...) has now received another lot of 20 letters for that very tx back in September. Also special X-mas transmissions are planned.

R.Tonair, Postbus 21, 7010 AA Gaanderen, NL, that blessed us with another appearance on 6240 kHz (some people never learn...) is announced to broadcast on 1508 kHz November 17th according to R. Orang Utan.

And, finally, before we go into the EDENBRIDGE STORY, typed by a kind OM, is news about R.Tutenchamun (c/o Bremen-adr) : The first testtransmission via R.Milano Int is planned for December 21, 1985, between 1100 and 1200 UTC on 7295 kHz. In case this test-transmission will be successful (and in case Milano has signed on until then...-ed), regular transmissons are planned via this outlet. Apart from that, they intend to pop up regularly on every 1st Sunday of the month via R.Delmare. Write in for their new info-sheet !

Until then with all the best 73s and FFFR,

Radio Telex

THE EDENBRIDGE STORY

as experienced by Atlanta Radio
1985

Atlanta Radio started using PO Box 319 at Edenbridge back in 1983 when the station made their comeback broadcast on 48mts in November.

Previously, Atlanta used the Kent Place/Norwell and PO Box 110/Orpington addresses but of all the three addresses the Edenbridge one has always been the worst although at the start it was never that bad.

PO Box 319 was run by a fellow called Mike Cottie who was involved in the "Free Broadcast Movement" and then became involved in radio in Ireland. When Mike was away his brother ran the address which he did quite well; it took a bit of time to get the mail but at that time the PO Box seemed to be reliable.

When Mike came back in 1984 and again took over the work concerning the address things really went bad. The mail for Atlanta was delayed by several weeks, and each time he was asked about that matter he replied the letters have just been sent off. However, nothing turned up and weeks went by and finally the mail arrived, at last.

On one particular occasion identical excuses were given to Mark Stafford and Dave Scott for no mail arriving there saying that the letters were sent but had the wrong address on the envelope, so the post office returned them to Edenbridge. Precisely the same excuse was given to two operators at the same time which seems to be a bit too much of a coincidence.

In late '84 an agreement was found with Mike which meant that Mark Stafford would come to Edenbridge to collect the mail for Atlanta himself. This seemed to work for a time and then Mike moved house to live in a flat in Crawley. In the past he used to live in Edenbridge at his parents' home.

Actually, things went even worse since on one occasion Mark Stafford went all the way down to Kent (a journey of a few hours driving) only to find that Mike was not there. So, the situation at that time was completely unhelpful for Atlanta; unfortunately, the station had no option but to stay with the Edenbridge address until Hunstanton came up as an alternative PO Box.

Atlanta has been using PO Box 5, Hunstanton, Norfolk since April 1985 which does work very well as there still is some mail pouring in through the address.

The reason for waiting so long to finally change address is that there is another project the Atlanta operators are involved in which is running through that Edenbridge address and a number of alternative agreements to make.

That project, by the way, is one of the reasons why Atlanta cannot get that much involved in SW broadcasting nowadays. At the end of July, PO Box 319 was closed completely, so there are no more troubles to expect regarding any station that used Edenbridge in the past.

Atlanta Radio likes to point out that they would not like to be associated with any of those stations which never answer

listeners mail like Radio Krypton, for example. Everyone writing in will get a reply providing return postage is enclosed.

Atlanta hopes to be back later this year on 48mts.

26-11-1985

Hi !

This is Telex back again after a weekend of quite busy Free Radio activity...well, let's put that to the Loggings-and Newssection. I'd like to take the opportunity of this introduction to recommend the new issue of the Pirate Info News which is due to come out about this time next week. Especially regarding the shortwave section in that mag is of extremely high value (speaking for myself, e.g.) and excellently filling gaps in background-information RADIOTELEX is not intended to cover in such an intensive manner. Enjoy also the very personal style these news are edited in. You'll find a promo-sticker somewhere in this issue.

The deadline for RT No.62 is December 10, 1985 (Tuesday) and, as a pre-info, here is the deadline for the Christmas edition (No.63): December 22 (Sunday), care will be taken of posting RT well in time then.

The Newssection

Apollo Engineering Services offer broadcast standard MW,SW,an FM trans- mitters built to the highest standards by qualified engineers at very reasonable prices starting at only £ 65,-- for a basic 20 Watts tx. They also offer an excellent after sales and advice service. Interested? Contact Chris Evans at RAI, P.O.Box 5, Hunstanton, Norfolk, UK or via the RT-adr.

Free Medway Town Radio is a real weekend project as Mr.Thompson, ope- rator of the station, told in an telephone interview I had with him on November 17. What he really is in need for are: more help with the station, more programmes to be recorded and a larger transmitter (we have kindly advised him to contact the above service...)

ctd...

as he at the moment only has a 15 Watts rig in operation. Feel free to contact him at the following address which I was asked to spread to all interested: Mr. Thompson, c/o Mr. B'samusement, Flat 2, The Promenade, Leysdown, The Isle of Sheppey, Kent, UK. Tel: 795-511041.

The next transmission of the Free Radio Service Holland is due to come on December 15, 1985 with a special X-mas-dedication-programme. Deadline for those dedications is December 4, 1985 ! So hurry up and write in ! Postbus 41, 7700 AA Dedemsvaart, NL

R.Nova , Postbus 85, Sluis, NL was heard on November 24 within a QSO-circle that took place around 6300 kHz and involved stations like Weekend Music R., PFBS and others. The intention for that QSO (as far as Nova itself is concerned) was to check out the transmitter for the planned marathon transmission next weekend, Nov.30/Dec 1, 1985 on 6290 kHz. Letters are very welcome , so please write in .

The Pirate Freaks Broadcasting Service recently impressed the world by their excellent promo-material as well as with a massive line-up of transmissions heard nearly every weekend on different frequencies in the 60, 48, and 41 m band. They used the RT-telephone-service for the 2nd time on November 24 and, indeed, 7 people from all over Germany called for instant reports. 04209 - 4030 is the number you should remember when hearing nearly all titles of various Madonna-LPs....c/o RT-adr

R.Marabu Int (sry), c/o RT as well, will be on via R.Delmare on Dec. 1st with a 90-minute-show.

R.Rainbow Int, station from Ireland, has a not-so-new "new" address (well...) which is : 151 Moneymore, Drogheda, Co.Louth, Eire. Letters shall be addressed to Headie Eddy, not to the station.

The Rebel R.Network , still claiming to transmit via various (ominous) ghostships has announced that with the beginning of Dec 1st, 1985, transmissions will come via the "Osaka No.2" as the "Osaka No.1" has been towed into a secret harbour to receive its winter maintenance. On the other hand, the MV Ocean Myth will soon be replaced by the MV Fuji Oil (...and from on 1986 by the Kodak Petrol, one reporter asks himself ?).

R.Scorpio, station heard again via Delmare on Nov.24, announced the mailing address of Postbus 19074, 3501 DB Utrecht, NL.

R.Sound of Sweden is planning to repeat their 10th birthday on Dec.1st via R.Delmare . Programmes are also planned relayed by various UK-stations as no own transmitter exists any longer.

According to the WR of Anoraks UK (No.81), Spectrum World BC hopes to be on the air again over Christmas on 6240, 7350, 9962, 11480 (or 11476) and 3905 kHz (latter one in LSB-mode). You can send an IRC or SAE to B.M.Broadcasting, London WC1N 3XX, UK for the SWB Bulletin.

Sunrise Radio informs you that they are still on every 1st Sunday of each month on 11416 or 11400 kHz from on 1000 and they intend to stay there also in 1986. Due to technical problems, the 3rd Nov.-tx did not went on the air. On Christmas Day, a special broadcast will be aired and your musical requests or announcements on tape are highly appreciated. c/o PB 41, Dedemsvaart.

R.Tango, strange QSO-station heard on 6300 kHz last Sunday, claimed to have a power of 25-100 Watts that day (oh yes...) and said that he knows the Telex-address while laughing...

R.Universum c/o RT-adr may pop up for the first time on Dec 1 on probably on 6293 kHz. They operate a 30 Watts transmitter. Use of the RT-phone may be possible.

Weekend Music R. announced to be on around X-mas on 6300 kHz, but you certainly will hear him before that, too. Greetings up to Scotland !

And that ends Telex for this time. 73 + FFFR

R.Skywave Int	6260	28	IRC	QSL-card, pers. letter, info
R.Liberty Sound	6285	9	IRC	QSL-card, pers. letter, info

On with the news, thanks again to a very busy reporter !

R.Atlantis SW , c/o Bremen and Hunstanton, is supposed to put out their annual Christmas party on shortwave, mediumwave, and FM December 15th. Should be great !

Britain Radio Int , c/o Utrecht and Salisbury, plans to be on again for one or two times in December with the following schedule : regular line-up of programmes (likely to be on Dec 22nd) : 0945 German service
ctd.

BRI ctd.

with Simon Hendrix , 1015 Roger Davis show incl. Free Radio News, 1130 Jayne's X-mas special, 1215 Norman Nelson, 1300 s/off. Boxing Day-schedule (Dec 26th) : 0945 Nonstop X-mas music, 1005 Roger Davis & Jayne, 1115 BRIs X-mas Party (DJs, guests, and listener's dedications), 1230 Norman Nelson, 1300 s/off

R. Delmare, Postbus 36, B 2050 Antwerp, Belgium, claims that they are at present testing on 9070 kHz to Africa and America on weekdays starting at 2300 UTC but not regularly. The current output-power is said to be about 1500 Watts (how much input do they have then-?) on 6207 kHz; according to a letter received from the station, the well-noticeable splatter is used to jam other stations away from their frequency...

Free Medway Town Radio (FMTR) which is one of the most active stations around at the moment on 6275 kHz now announces a new mailing address : FMTR, P.O. Box SH9, Sherness, Medway ME12 1AQ, England. Nevertheless, people who sent in letters to the address mentioned in RT No. 61 must not be too anxious now that it won't arrive where it should - this address is available still and was especially asked to reprint by Mr. Mark Thompson who is the main DJ (apart from his girl friend). FMTR at the moment uses the old R. Stella/Scotland-transmitter and recently increased the power from 15 to some 20 Watts by applying a higher voltage to the PA-807-valve. FMTR will probably relay the German Canzoni Radio in the near future and also plans to change the frequency to 6300 kHz on Dec 15 after being on 6275 kHz on Saturday, Dec 14. This is to escape from interference down there.

Rumour has it that R. Hotel Amigo (Postbus 113, 9104 ZJ Damwoude, NL) was raided recently by the Dutch PTT when broadcasting on 1055 kHz where they relayed R. Liberty Sound from France. It is suggested that the raid was undertaken due to interference RHA (also active under the name of R. Waddenzee on MW) caused to the Danish radio outlet on 1062 kHz. Anyway, it must be pointed out that nothing has been confirmed as yet.

The Dutch service of R. Ireland Int now has an own address available : NURI (Nederlandse Uitzendingen Radio Irland), Postbus 65027, 3002 DA Rotterdam, Holland. The English and German services can still be contacted at 442 Hartstown, Clonsilla, Dublin 15, Eire.

R. Milano Int has returned during the first week of December on 7295 kHz with their usual good signal though it appears nothing has been changed there in the meantime. Moreover, RMI has not forgotten to keep DXers busy by cutting off programmes in the middle and changing the tapes again etc.... To pick out two stations which are relayed by RMI Regularly now, R. Joystick was noted last Saturday morning (their December broadcast contains two hours of "Joymix"-the best in funky stuff) and R. Earth resuming their European service Dec 8th and being on every Sunday 0800 - 1100 UTC, including many interesting DX-items.

R. Pamela, 82a Delce Road, Rochester, Kent ME1 2DH, England, has been overwhelmed by some 50 letters & reports that were received for the 3-hour transmission on Nov 3rd via Delmare. So far, so good. Pamela also tells that they now have a 25-Watts-tx available for SW-BC and it might be possible to hear them one day on the following frequencies (not simultaneously, fools !): 6200.4, 6298.89, 9111, 11063.5, 11080.5, and 11081 kHz. Furthermore, 6741 kHz may also be used for a change.

R. Privat, station from Germany broadcasting via Delmare, has the following address : Turmstrasse 26, D 6500 Mainz, FRG.

Rainbow R. P.O. Box 725, Arnhem, NL from West Germany has altered their plans for mediumwave-relays from the Netherlands. Here is now what is planned for the near future: an extra transmission on Friday night/Saturday morning Dec 13/14 via R. Casablanca on 1620 kHz lasting 1 hour. The official close down BC to be heard on Saturday night/Sunday morning Dec 21/22 0030 - 0200 UTC on 1615 kHz. Times and frequencies may

ctd....

Rainbow R.-ctd...

vary slightly for various reasons. Well, the unofficial close-down BC is to follow shortly with a 1 hour transmission via Falcon Radio / IRRS featuring three DJs from two countries around New Year...Prosit ! Oh...yes, I have forgotten to mention that Falcon R. will introduce a German service for two hours per month from on 1986.

R.Rainbow Int "from the East coast of Ireland" used a new tx for the Dec 8 transmission on 6240 kHz. As from Dec 15 onwards Ian Murray will join the station to present the FRC-Ireland show on Rainbow every Sunday. Tapes of the Four Freedoms RN from Texas (Yippieh !!-ed)/USA are also aired over Rainbow. You can contact them (Rainbow, not FFRN) at 151 Moneymore, Drogheda, Co. Louth, Eire.

The Satellite BCC, now also c/o RT-adr, will be on via a UK-relay-station on 7400 kHz on Dec 22nd, 1985. Another relay will also be possible on X-mas Day on 41m.

Starfleet Radio, Postbus 19074, 3501 DB Utrecht, NL, intends to get their final broadcast relayed via Mirage as well as the IRRS; besides, the 90 min-programme shall be aired over Delmare on Christmas Day (Dec 25), possibly at 1130 UTC.

R.Tutenchamun, c/o RT-adr, will be audible in the Pacific via KIWI R. from New Zealand over Christmas as well : on 89.0 FM, 1575 kHz MW, and 5850/7340 kHz SW. To remind you : As RMI is on the air again, RTUT may also be on on Dec 21, as announced.

R.Universum, c/o RT-adr, made it ! Another project that runs the risk of operating an own transmitter - great ! They were heard in Italy and the UK on Dec 1st when they made their very first appearance on SW with an "antenna, that may have touched the soil at some points ..." 6297 kHz is their Frequency.

Some items regarding US-piracy which might be of interest to European DXers as reported by TransAtlantic Free Radio :

Medieval Radio is to be relayed for half an hour within the month of December, probably on 48 metres. Radio Woodland International, a station known for their pro-nature attitude, may be put out within the FRS-Holland 3rd Sunday schedule in January (Jan 19th, 1300-1330 UTC). The address for both station reads as follows: PO Box 5074, Hilo, Hawaii 96720, USA.

Radio Dead Man was supposed to be put out via Delmare courtesy of Radio CLCG but wasn't for an unknown reason. Anyone heard this in the meantime ? In case you would like to contact RDM, here is their address: RDM, c/o PO Box 110, Johnson City, New York 13790, USA.

Finally, news about the "good old" Weekend Music Radio (c/o 42 Arran Close, Cambridge, England):

They are planning a marathon broadcast line-up on Christmas as following: 2 transmitters on 48m, 1 transmitter on 41 m, 1 transmitter on 15045 kHz, all run simultaneously. Use of a 100 Watts transmitter is possible on 48m, here are possible QRG's : 6290, 6300, 6315 kHz. This 100 W-rig will be operated between 0000 UTC /24-12-1985 and 0900 UTC/25-12-1985 featuring a test-loop-announcement for North America. Actually, on the 25th, 2 transmitters will be fed with live-programming in parallel on 48/41m and the other two will be working with recorded stuff from the Danish R.Delta and also (probably) Apollo (!). For insiders who know the studio-tel.-no. of WMR : there will be a live phone -in then !

News from Laser and Caroline ? Phone UK-01-989-3451, a changing tape will inform you.

Bye + 73, FFR

The Newssection

ABC Radio from Waterford, Ireland, recently answered mail signed by a person named Joe Cashin. He stated that although he has offered to answer their mail and in return could use a small ABC-transmitter for his own station (see Riverside R.-item), he has no connection with ABC. This only to clear up former news-items in RT stating that Riverside and ABC is one and the same station.

R.Atlantis SW that recently made their promised transmission on 6270 kHz / 1134 kHz / 105 MHz also featuring a phone where everybody could give a report on how reception was etc... is planning to come up again on FM 105 MHz on one Sunday evening in January 1986 at 7 pm. c/o Bremen and Hunstanton-adr

R.Apollo Int is still alive ! Can be heard with a new show and relay probably on December 29, 1985 or January 5, 1986 on 48 m. c/o Hunstanton and Bremen as well for this one .

Radio "C", privately operated station in Italy on FM, plans to come on shortwave too soon or even made it as these lines are written. Frequency is 9810 kHz and they probably won't get any response for that relatively high outlet.

Falcon R. is cross with ABC Radio and asks every listener to write to them at 4 Arundel Square, Waterford City, Ireland to complain about interference ABC has caused to Falcon when being down there since February 1985. For the time being, Falcon pops up with two or three transmitters at the same time, putting out own programmes as well as the dreaded Rebel Radio Network, that sort of SHIT, NOBODY wants to hear. When they have built a larger transmitter, they will come back to 6200 kHz to bury ABC, hey !

Free Medway Town R., P.O.Box SH9, Sherness, Medway ME12 1AQ, England, now on 6300 kHz playing solidly loud and clear, may relay Canzoni R. (Bremen-adr) on Boxing Day (December 26).

IRC-s. News has reached us that the German GPO will endeavour an increase of the price of an International Reply Coupon. This now costs DM 1,30 and when you exchange it at the Post Office you now get DM 1,20 back for it (in stamps only). The new price will be DM 2,20 !!!!! but you as well will get only DM 1,20 for it when swapping it for stamps. Unbelievable ! I hope you all will restrict to buy these then and instead swap stamps with our SAE-service...

PFBS, the Pirate Freaks Broadcasting Service (c/o Bremen), will be on on December 25 at around 1100 GMT for one hour on 48m (6220 kHz, 6290 kHz or somewhere...) featuring shows by Bill Kirkwood and Pirate Andy. Use of the RT-phone (see page 1 for details) will be made.

R.Rainbow from Ireland won't be on with their own transmitter on X-mas to leave 6240 kHz clear for one outlet of Weekend Music Radio which also plans to put out a tape with a R.Rainbow-programme then.

The legendary ship "Osaka No.2" today anchored in the River Ribbel Estuary off Lythan St.Anne's which is quite near to Blackpool...and also might be the solution why Barry Johnston wasn't in this afternoon when I tried to phone him....

Riverside R.International has answered a reception report and tells: "We have broadcast since Sept 29, 1985 on 6200 kHz with 60 Watts." Joe Cashin of that station says: "I have some friends on ABC and they are going to give me a hand to set up a small SW station for Sunday mornings (Pirate-Anorak). In the meantime, their bigger transmitter with 60 Watts output is at my home-QTH and I relay their MW/FM-transmissions on shortwave daily from around 7 am to 2 pm on 6200 or 7350 kHz. I have done two broadcasts on 6210 kHz with a power output of

Riverside ctd...

only 5 Watts, the best report I got was from the Channel Islands." So you see now who is to blame for spoiling Falcon Radio ?!?! Riverside will return shortly on 48 or 41 m according to Tony Clarke of R.Ireland Int.

Starboard Sound will be back over X-mas on 6306 kHz or 6300 kHz. Also heard on Dec 15, 1985 with a 2-hour-broadcast on 6306 kHz. c/o Hunstan-ton.

A programme aimed at the US-audience was recently broadcast via Medi-eval Radio /USA on Nov. 29, so R.Titanic Int (that was the one who has been relayed) will probably thousands of letters soon. QRG was 7435 kHz between 2245 and 2315 UTC.

R.Tutenchamun (c/o Bremen) will be on via Delmare on January 5, 1986.

R.Universum (c/o Bremen) will also pop up for the second time on January 5, 1986 on probably 6297 kHz between 1100 - 1200. On January 12, tests will take place from a different site with various antennae: at 1100, 1200, 1300 UTC, always 20-30 minutes long on either 6275 kHz or 6297 kHz. Also appearances via R.Delmare are possible in February.

R.Victoria plans to comeback via Delmare (good grief !) on January 11 or 18, 1986 with three hours programming twice a month on Saturday afternoons (causing severe competition to the CLCG !). Their address remains as Postfach 00, D-1201 Pähü in Floitschepiepen.

And that ends RADIOTELEX in 1985. Thank you very much for your initiative to support our work for Free Radio. Those concerned will know whom I'm writing of !
See (and hear) you back in 1986 !

73 + FFFR,

RADIOTELEX

NO, OF COURSE IT'S THE SUITCASE-TX !

RADIOTELEX SPECIAL EDITION: Christmas loggings 1985

Due to the rather small amount of loggings printed in RT 64 we decided to compile a more comprehensive listing of what was on over Xmas 1985. Please remember that as usual all times are GMT/UTC, so here we go...

				S-rate
kHz	station	rec time	remarks	UK -CON -SCA

7295	R.Milano Int			

And that ends our list of what was to be heard over the Christmas and New Years holiday season; in spite of UK loggings lacking in most cases we are quite sure that we have listed almost every broadcast that was made at that time. Thanks a lot to everyone who has sent in a contribution to it or in any way has participated in compiling this special edition of Radiotelex.

Finally, we would like to list the addresses of some of the stations which made more or less extraordinary appearances over the Christmas period :

Spectrum World Broadcasting, B.M.Broadcasting, London WC1N 3XX, UK.
Radio Waves International, B.P. 130, F-92504 Rueil Cedex, France.
Sounds Alternative, 190 Monument Road, Edgbaston, Birmingham B16 8UU, UK
Medieval Radio, PO Box 5074, Hilo, Hawaii 96720, USA.
Weekend Music Radio, 42 Arran Close, Cherry Hinton, Cambridge, UK.
Radio Enterprise (NL), Postbus 19074, 3501 DB Utrecht, Holland.
Rainbow Radio (Germany), Postbus 725, Arnhem, Holland.
Radio Madison, Postbus 41, 7700 AA Dedemsvaart, Holland.
Canzoni Radio, c/o Postfach 750925, D-2820 Bremen 70, West Germany.
Atlanta Radio, PO Box 5, Hunstanton, Norfolk PE36 5AU, England.
Radio Liberty Sound, JLV, 2 Avenue du Vieux-Moulin, 62630 Etaples, France
Radiostation Arena, Postbus 47, 7010 AA Gaanderen, Holland.
Radio Kristel Int, 58 Aldersbrook Road, London E12 5DY, England.

73s & FFR,
